CHAPTER 1. MARINE INSPECTION PRODUCT SET SUMMARY

A. General.

1. Design. The Marine Inspection product set is designed to capture all relevant information about periodic and special inspections of vessels and facilities as specified by the Marine Safety Program; to report these, as appropriate, through the Coast Guard chain of command; to maintain lists, logs, and prompter files; and to generate letters and certificates in support of the operational inspection program.
2. Use. The product set contains both entry/update and retrieval products. In entry and update mode, MSIS contains products for scheduling inspections, "filing" inspection and deficiency reports, and recording special inspection notes. In retrieval mode, in addition to the ability to review all entry transactions, MSIS creates lists and logs providing information concerning scheduled and overdue inspections, case summaries and status, and the Certificate of Inspection.
3. Transaction Guide. This guide presents the Marine Inspection transactions, their content, and how they are to be used. The guide also includes a discussion of how the product set works with MSIS, and a discussion of how cases and vessels are identified and numbered. Instructions on logging into MSIS and terminal use are contained in the MSIS asic Users Manual and Operating Guide, COMDTINST M5230.11.

B. Data Controls and Accounting Procedures.

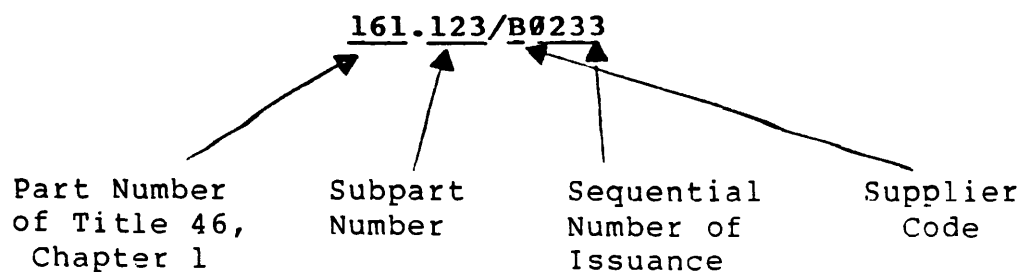

1. MSIS Data Controls. Because MSIS contains an integrated data base, which is updated by all functions which participate in MSIS, certain controls are imposed on certain data to ensure their correctness. From the standpoint of Marine Inspection, the combination of the following data are used to identify inspection activities on vessels and facilities:
 - a. Case Number (must be unique)
 - b. Deficiency IDENT (must be unique within a case, though not unique to MSIS)
2. MSIS Accounting Procedures. To delegate control over the data and to properly link Marine Inspection activities to their proper port, vessel or facility, MSIS uses a convention of identification numbers.

- a. Marine Inspection Case Controls. Marine Inspection incidents are identified with a unique number which permits MSIS to identify a specific inspection report. This number is called a CASE NUMBER and is the main requirement for accessing Marine Inspection products. This case number is assigned by MSIS during the inspection scheduling process. It is a 10-character element with the following attributes:

In the above example, the CASE NUMBER represents the first Marine Inspection case in 1986.

- b. Vessel Identification Case Numbers. Like Marine Inspection Case Numbers, these numbers are used to identify specific inspection reports. Though VI Case Numbers are no longer assigned by MSIS, older cases use these numbers for identification. VI Case Numbers have the same basic composition as Marine Inspection Case Numbers, e.g., VI85000847.
- c. Subchapter Q Numbers. The Subchapter Q Number or QNUM is assigned to a particular piece of marine equipment that has been through the approval process. The QNUM must be at least 12 digits in length and all zeros must be included when using it to access a product in MSIS. The QNUM has the following composition:

- d. QCLASS Number. The QCLASS Number is the first seven characters of a Subchapter Q Number, including the period. Like the Subchapter Q Number, all zeros must be included when using the QCLASS to access an MSIS product. The QCLASS Number consists of the following:

- C. Product Descriptions. The Marine Inspection product set is designed to support the periodic and special inspection of vessels and facilities as specified by the Marine Safety Program.
1. Entry, Update and Retrieval Products. The entry, update and retrieval products for Marine Inspection are designed to document and report the necessary aspects of the marine inspection activity. These products are accessed using the Marine Inspection Entry Index (MIEI). These products are described below.
- a. MIEI. Marine Inspection Entry Index. This product is the master menu or index used to access all transactions in the Marine Inspection product set.
 - b. MISF. Marine Inspection Scheduler Function. This product is used to enter marine inspection scheduling information, to cancel previously scheduled inspections and to change schedule information before the inspection report has been filed.
 - c. MIAR. Marine Inspection Activity Report. MIAR permits the recording of information pertaining to the inspection of a particular vessel, platform or factory.
 - d. MIDR. Marine Inspection Deficiency Report. This product is used to describe an inspection deficiency as a supplement to the inspection report.
 - e. MIDF. Marine Inspection Deficiency Follow-Up. MIDF is used to report any follow-up action to any outstanding deficiency of a vessel or facility, regardless of which unit issued the deficiency.
 - f. MISN. Marine Inspection Special Notes. MISN is used to file a vessel or facility's special inspection notes.
 - g. MICN. Marine Inspection Class Notes. This product is an entry product used to post MISNs to a vessel class.

- h. **MISE.** Marine Inspection Special Examination. This product provides a means to manage special inspection programs and enables a quick response to changing laws and regulations.
 - i. **MICA.** Marine Inspection Certificate of Inspection Amendments. This product is used to describe any amendments to a vessel's COI.
 - j. **MISD.** Marine Inspection Status Details. This product is used to report the inspection dates of specific equipment, machinery or components of a vessel.
 - k. **MIAE.** Marine Inspection Approved Equipment. MIAE permits the recording of data concerning a particular piece of approved marine equipment.
 - l. **MIEC.** Marine Inspection Approved Equipment Classes. This product serves as an index to Subchapter Q class numbers, given a particular class description.
 - m. **MIEL.** Marine Inspection Equipment List. MIEL serves as an index to Subchapter Q numbers, given a particular class number.
 - n. **MIFI.** Marine Inspection Field Instruction. MIFI provides a way for Headquarters to supply inspection instructions to the field offices.
 - o. **MICD.** Marine Inspection Class Description. MICD permits the recording of standard text data for each class of Subchapter Q equipment.
 - p. **MISP.** Marine Inspection Status at Port. This product displays open inspection case summaries and case status filed by the unit.
2. **Retrieval-Only Products.** There are eleven retrieval-only products available in the Marine Inspection Party Set. They are also accessed through MIEL.
- a. **MISS.** Marine Inspection Status Summary. This product is used to view a summary of a vessel or platform's critical inspection-related items, its periodic inspection status and all regulatory safety documents on board.
 - b. **MICP.** Marine Inspection Critical Profile. MICP displays specific and unusual inspection-related items pertaining to a vessel or a platform.
 - c. **MICOI.** Marine Inspection Certificate of Inspection. This product is used to print COI data on plain paper for review purposes.

- d. **MIPL**. Marine Inspection Port Log. MIPL is used to display closed inspection case summary information.
 - e. **MISL**. Marine Inspection List of Scheduled Inspections. This product lists scheduling information about all inspections currently scheduled, but not filed, by a unit.
 - f. **MICIF**. Marine Inspection Certificate of Inspection Form. MICIF is used to print a Certificate of Inspection on the pre-printed, continuous-feed COI form, Form CG-841.
 - g. **MICOA**. Marine Inspection Certificate of Approval. This product is used to print the Certificate of Approval on the official U.S. Coast Guard form.
 - h. **MIPIP**. Marine Inspection Pre-Inspection Package. MIPIP presents a composite of all vessel-related MSIS information relevant to the inspection of a particular vessel.
 - i. **MIOI**. Marine Inspection List of Overdue Inspections. MIOI displays information about vessels and platforms attached to a given unit that have overdue inspections.
 - j. **MIFR**. Marine Inspection List for Fleet of Responsibility. MIFR displays vessels whose most recent inspection for certification was filed by the specified unit.
 - k. **Marine Inspection Letters**. There are seven products which generate letters to inform a vessel's operator of a needed inspection, an expired COI, the extension of compliance dates for outstanding requirements and non-compliance with such requirements. These letters are: Marine Inspection Letter of Notification (MILON), Marine Inspection Letter of Expiration of Certification (MILEC), Marine Inspection Letter of Extension of Requirements (MILER), Marine Inspection Letter of Issuance of Requirements (MILIR), Marine Inspection Initial Letter of NonCompliance (MIILN), Marine Inspection Final Letter of Non-Compliance (MIFLN), and Marine Inspection Reinspection Notification Letter (MIRNL).
- D. **SELECTION and MORE Logic**. Some MSIS products allow both selection from a list of cases or reports and multiple pages of these cases or reports, requiring the use of the MORE command. When products combine both of these features, there are several options that the user may choose from to access the various parts of these products. Once the first full page of cases or reports (50) has been accessed, the message

"KEY SEL,1,2..." appears in the Response Slot and the following options are available:

1. Press **SEND** with a Blank in the command Slot to cause MSIS to display the message "KEY MORE FOR NEXT PAGE" if more cases or reports exist.

The user may then:

- a. **SEND** a Blank command which starts the execution of the user's previous selections (if any) or displays the next product on the queue.
 - b. **SEND** more selections to add items to the queue. The Response Slot then displays the message "SEND FOR SELECT(S) OR MORE".
 - c. **SEND** the **MORE** command to access the next page of data.
 - d. Enter a free-form command and press **SEND** to halt execution of the current product and access a new product.
 - e. **ABORT** to halt execution of the current product.
2. **SEND** selections to add items to the queue. The Response Slot displays the message "SEND FOR SELECT(S) OR MORE".
 3. Press **SEND** with **MORE** in the Command Slot to display the next page of data.
 4. Enter a free-form command and press **SEND** to halt the execution of the current product and access a new product.
 5. **ABORT** to halt execution of the current product.

CHAPTER 2. MARINE INSPECTION INDEX

A. Marine Inspection Entry Index --MIEI.

1. MIEI Purpose and Description.

- a. Provides the means for the selection of any Marine Inspection product which is accessible in **E(ntry)**, **U(pdate)** or **R(etrieval)** mode.
- b. Allows entry of vessel, facility, case, class or equipment identifying data that are used within Marine Inspection products. If vessel and facility identifying data are both in global memory, MSIS displays only the identifier used most recently.
- c. Provides information concerning scheduled inspections and a request for the user's response when the user requests MISF and the vessel or platform already has either an inspection scheduled or an open Marine Inspection case.
- d. Provides an entry paragraph for listing MI case numbers and deficiency identification numbers to be used with MIDF, when MIDF is requested.
- e. Figure 2-1 shows the data definitions for MIEI. See Table 2-1 for the code values and Enclosure (1) for the abbreviation meanings.

2. Accessing MIEI.

- a. Menu. MIEI is normally accessed through the MSIS Directory Menu.
- b. Free-Form. MIEI can be accessed through free-form with:

-MIEI
- c. Selection From Other Products. MIEI is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. MIEI Data Entry Requirements and Explanation.

- a. General Processing. MIEI is the master menu for the products in the Marine Inspection product set. The selection of Marine Inspection products may require the use of a VIN, FIN, Unit, QCLASS, QNUM, MI Case Number or **NEW**. Table 2-2 shows the required and

optional information used to access the products on the MIEI menu.

- b. Special Processing. When the user requests MISF in **E(ntry)** mode from MIEI and the vessel or platform already has either an inspection scheduled or an open Marine Inspection case, MIEI responds with a list of all currently scheduled inspections and asks the user for his/her next desired action. The user can either decide not to schedule the inspection or can go on to MISF to schedule it.

MIEI also responds with a special screen when the user selects MIDF in **E(ntry)** mode. MIEI provides twenty (20) lines for the entering of IDENTs and Case Numbers for Follow-ups to be filed. If the Case Number is the same for multiple deficiencies, the user need only enter it on the first line of the group of IDENTs being entered. MSIS responds with the requested number of MIDFs queued up in a series.

- (1) In products where VIN and FIN are marked "R", VINs are required to access vessels and FINs are required to access facilities.
- (2) For initial entry into MISF, "NEW" must be used in the Case slot.
- (3) CASE is required in update mode; VIN is required in R(etrieval) mode.

CHAPTER 3. INSPECTION REPORT ACTIVITY

- A. General. All inspection report activity--from scheduling an inspection to reporting on it in various reports and notes-- is included in this chapter. The Marine Inspection Scheduler Function (MISF) is used to schedule inspections and assign a MI case number. The inspection reporting function is handled by three products: Marine Inspection Activity Report (MIAR), Marine Inspection Deficiency Report (MIDR), and Marine Inspection Deficiency Follow-up (MIDF). Inspection notes are entered using MISN--Marine Inspection Special Notes and MICN--Marine Inspection Class Note.

B. Marine Inspection Scheduler Function -- MISF.

1. MISF Purpose and Description.

- a. Used to schedule inspections for vessels, platforms and factories.
- b. Displays either vessel or facility identifying information, depending on whether a vessel or facility inspection is being scheduled. For factories, identification slots are open for the entry of Name only.
- c. Allows for the scheduling of progressive inspections for vessels.
- d. Displays the summary paragraph from the Marine Inspection Critical Profile, MICP. (This does not apply to factories.)
- e. Displays the current periodic inspection status from MISS. (This does not apply to factories.)
- f. Maps Inspection Type(s), Date, Port, Reference Case Number, the Progressive Indicator, and Location to MIAR when MIAR is accessed in E(ntry) mode.
- g. Makes an entry in the Current Status columns of MISS by inspection type. (This does not apply to factories.)
- h. Posts entries on the port's list of scheduled inspections, MISI, ordered by date, oldest cases first.
- i. Figure 3-1 shows the data definitions for MISF. See Table 3-1 for the code values and Enclosure (1) for the abbreviation meanings.
- j. The uses of MISF are illustrated in the following example sequences entitled: Scheduling a Vessel Inspection and Scheduling a Facility Inspection.

2. Accessing MISF.

- a. Menu. MISF is normally accessed through MIEI.
- b. Free-Form. MISF can be accessed through free-form with:

-MISF,E,VIN=<vessel identification number>,CASE=NEW

or

-MISF,E,FIN=<facility identification number>,CASE=NEW**

where:

E = entry mode

VIN = vessel identification number

FIN = facility identification number

** The facility form of free-form is used for factories with: **FIN=FACTORY**

EXAMPLE:

-MISF,E,VIN=CG000174,CASE=NEW

-MISF,E,FIN=FACTORY,CASE=NEW

or

-MISF,U or R,CASE=<inspection case number>

where:

U = update mode

R = retrieval mode

CASE = inspection case number

EXAMPLE:

-MISF,U,CASE=M186000671

c. Selection From Other Products. MISF is not accessed from other products.

d. Product Use Authority Levels.

Retrieval – 1 Entry/Update - 2

Cancel an Inspection - 3

NOTE: For both Entry/Update and Cancel an Inspection, the logged in port code must be the same as the port that initiated the case.

3. **MISF Data Entry Requirements and Explanation.**

- a. General Processing. In **E(ntry)** mode, the user accesses MISF through MIEI by entering either VIN or a FIN and Case Number=**NEW**. (NEW directs MSIS to create a new case number.) MSIS responds with the MISF form, containing the subject identifying information, a summary paragraph from MICP, the periodic inspection status, and a paragraph for scheduling the inspection.

The ACTION slot in the Periodic Inspection Status section lists the open case number for each type of inspection. A plain case number indicates that the inspection has been filed., a * before the case number indicates that an MIAR is "In Process" while a - indicator means that the MIAR is "Complete". When the case has been validated, the three data slots under CURRENT STATUS will be blank and the inspection date and port code for the port that completed the inspection will appear in the Periodic Inspection Status section.

The user enters the inspection type(s), the contact point, date, location of the inspection, the date the Coast Guard was notified that the vessel or facility will be ready for inspection, general comments, a reference case number if appropriate, a port to be notified of the inspection and whether it is a progressive inspection (for vessels) or a Self-Certification Exam (for platforms). The inspection port is filled with the login port's code and is unlocked. The port may be changed.

If the user attempts to schedule an inspection for a vessel or facility that is already scheduled, the potential conflict may be handled by either MIEI or MISF. First, MIEI reminds the user of all currently scheduled inspections and asks the user for his/her next desired action. The user can either decide not to schedule an inspection or can go on to MISF to schedule the inspection. If the user attempts to schedule a periodic inspection which is already scheduled, MISF will refuse to do so. However, a different inspection type will be accepted if it is part of an allowable inspection type combination. (See Table 3-2 for a list of allowable inspection type combinations.) The exceptions to this are the types "ADM" (Administration) and "OTHER". If the Inspection Type is "ADM" no additional inspection types are allowed. More than one "OTHER" inspection may be scheduled for the same vessel or facility, as long as these inspections are scheduled under different Case Numbers.

Please note: If the user's logged in port is not equal to the Port of Certification (POC) and the inspection type is a "major" inspection, MISF generates a morning report to the POC. If the POC unit code is equal to INACT, NULL or NONUS, a morning report is not generated.

In **U(pdate)** mode, MISF may be used to correct or change an existing inspection schedule or to cancel a scheduled inspection if no MIAR has been filed. If the user cancels a major inspection type that was originally overdue, that inspection is re-entered on the Marine Inspection List of Overdue Inspections, MIOI. A user must have an authority access level of 3 or greater to cancel an inspection.

MISF may be accessed in **R(etrieval)** mode by specifying the inspection case number. In this mode, it is used to view the scheduled inspections for the specified case.

- b. Special Processing. MISF may be used to schedule progressive inspections. This type of inspection is limited to the following inspection types: Initial Certificate, Certificate of Inspection, Reinspection, Hull exams, and Certificate of Compliance. The inspection types must be indicated on MISF with an "X" entered in the PROGRESSIVE(X) data slot. The inspection types are mapped from MISF to MIAR and locked. If an inspection is entered as not being progressive but actually is progressive, enter an "X" in the inspection's CLOSE TO FILE slot on MIAR, then create a new inspection on MISF which represents the old inspection and enter an "X" in the PROGRESSIVE (X) data slot on MISF. If the inspection is opened as progressive but is not, close it normally.

When a progressive has been passed, the receiving unit can update the DATE, LOCATION, CONTACT and COMMENTS slots on MISF. A morning report entry is generated to the receiving unit as a form of notification that a progressive has been passed to that unit.

MISF is also used by detachments (MSD, MIDET, and PSD) to schedule inspections. Such use causes entries to be made on all of the detachment's logs, just as these entries would be made for any unit. See MIAR for more information on detachment inspections.

C. Marine Inspection Activity Report -- MIAR.

1. MIAR Purpose and Description.

- a. Permits the recording of general information pertaining to the inspection of a particular vessel, facility or factory.
- b. Provides an entry point for inspection counts on PFAS and PFMI and displays portions of the data on MICIF.
- c. Serves as a menu for MIDR, MISN, MICA, and MISD.
- d. Used to record resources (staff hours) used to perform inspection-related activities.
- e. Updates the following products: MISP, MISS, MIOI, MIPL, MISI, MISF, MIFR, VFID, VFID, VFOC, VFMI, FFOC, FFMI, PFMI, PFAS, PFMR, and inspection-related letters.
- f. Must be filed to process the following products: MIDR, MISN, MICA, and MISD.
- g. Figure 3-2 shows the data definitions for MIAR. See Table 3-3 for the code values and Enclosure (1) for the abbreviation meanings.
- h. The uses of MIAR are illustrated in the following example sequences entitled: Entering an Inspection Report, Correcting/Adding to a Previous Report, Validating an Inspection Report, and Sending of a Progressive Inspection.

2. Accessing MIAR.

- a. Menu. MIAR may be accessed through MIEI.
- b. Free-Form. MIAR can be accessed through free-form with:

-MIAR,<E, U, or R>,CASE=<inspection case number>

where:

E = entry mode

U = update mode

R = retrieval mode

CASE = inspection case number

EXAMPLE:

-MIAR,U,CASE=MI860751

c. Selection From Other Products. MIAR can be accessed from MIPL, MISP, VFMI and VFOC. In **U(pdate)** mode, it can be accessed from MISI.

d. Product Use Authority Levels.

Retrieval – 1 Update - 2 and logged in port code
is equal to the port initiating
the case.

Validate/Pass a Case or Close To File - 3

3. **MIAR Data Entry Requirements and Explanation.**

a. General Processing. In **E(ntry)** mode, MIAR may be accessed through MIEI, using the MI Case Number. MIAR responds with a form containing space for the inspection report, an Actions Reported section which presents a summary of actions taken or to be taken in other MI products, and a section for reporting the number of staff hours used to perform the inspection, by inspection type. (See Table 3-3A for an explanation of how time may be spent.) The user enters all available information, whether complete or partial, and enters an "X" in the correct inspection status slot -- INPROC (in process) or COMP (complete). Neither VALID (validate) nor CLOSE TO FILE are permitted when filing MIAR for the first time. Also there must be at least one inspection type listed on MIAR. Except for progressive inspections, Inspection Type is mapped from MISF but is unlocked and may be changed. (See Table 3-4 for a list of valid inspection types permitted for various types of vessels and facilities.) For vessels, if more than one inspection type is listed, only an allowable combination of inspection types may be entered. See Table 3-5 for a list of allowable inspection type combinations for vessels.

The "OUT?/" slot represents the outstanding requirements and is system controlled. If the slot contains an "N", the deficiency has been repaired. If "Y", the vessel can proceed to the next port before being repaired. If the slot is blank, there are no deficiencies.

On administrative cases, MIAR checks that the Certificate Action is not "Issue" or "Reissue" and allows the user to file any supplements except a new deficiency. Also, the user may change a reinspection and/or drydock date but is not allowed to change the dates for Certification of Inspection or Certification of Compliance.

The Inspector's initials appear on MIAR only while the report case remains open. They are removed from MIAR at the time of validation.

In **U(pdate)** mode, the user may add to, delete from, or correct an existing MIAR that has not been validated. **U(pdate)** mode may also be use to validate a report, that is, to certify that the MIAR and all related supplements are complete and finalized. The following requirements must be met before MIAR can be validated:

1. All supplements reported must be filed.
2. If the inspection type is Initial Certification, Certification or Certificate of Compliance (or its equivalents), an MISD is required.
3. Staff hours must be listed on the MIAR.
4. The data slots for passing the case are blank.

Validation is accomplished by entering an "**X**" in the Valid slot during update. The act of validation makes it impossible for the user to further modify the MIAR or its supplements. (Validation is essentially the same as the OCMI's signature or a signature by direction of the OCMI.)

The Certificate of Inspection document in VFLD is updated by MIAR at validation if appropriate. MIAR is the only product that can update the COI in VFLD. See Table 3-6 for the impact that filing and validating an MIAR has on other MSIS products.

MIAR may be entered in **R(etrieval)** mode to view an activity report for a specific report.

MIAR may be used as a menu to access the following products: MIDR, MISN, MICA and MISD. These products may be selected only prior to report validation in **E(ntry)** and **U(pdate)** modes, but are always available in **R(etrieval)** mode. (The mode in which these products is selected is the same as the mode in which MIAR was accessed.)

- b. Special Processing. There are five areas of special processing for MIAR: Closing a Case To File, Deactivation of a Vessel, Permit To Proceed, Inspections at Detachments and Progressive Inspections. Each of these is discussed below.

- (1) Closing a Case To File. A case is closed to file when a required periodic inspection has been started (an MIAR has been filed but not validated or for some other reason), but will not be completed because the vessel is taken out of service. The Certificate Action on the MIAR may not be "Issue", "Reissue" or "Valid". The MIAR is closed by putting an "X" in the CLOSE TO FILE status slot. This action saves only the information in the Time Spent section of the MIAR.
- (2) Deactivation of a Vessel. To deactivate a vessel, the Inspection Type entered on MISF must be "ADM" and at least some hours must be listed in the Time Spent section of the MIAR. The user then enters "DEACT" in the CERTIFICATE ACTION slot on MIAR and presses SEND. This moves the vessel from the Port of Certification (POC) to the port code "Inact" and changes the Certificate Status from "Valid" to "Invalid". However, the vessel is not lost or removed from the data base. The deactivation does stop the generation of letters. Any vessel that has been deactivated may be restored by filing an MIAR for Certification.
- (3) Permit To Proceed. The Certificate Action on MIAR may be set to Permit To Proceed by entering "PTP" in that slot. This invokes special background action on MSIS. On VFLD the document status for the Certificate of Inspection entry is changed to PTP. If a user attempts to generate a Certificate of Inspection when a Permit To Proceed exists, a warning message is issued before the COI is executed.

A Permit To Proceed is rescinded when another MIAR is filed with any certificate action except "DAC" or "NONE". The code value "VALID" is then mapped into the STATUS data slot on VFLD.

Please Note: A Permit To Proceed is an allowable Certificate Action for a progressive inspection.

- (4) Inspections at Detachments. MIAR is designed to allow a detachment to handle its own inspections in the same way as its "parent" unit, until validation becomes necessary (detachment-parent command relationships are established in PFID). All of the same logs are available to the detachment and they function in the same way as those of any other unit. Once the MIAR is passed to the "parent" unit, the case is processed at the detachment as if it was validated. The case is removed from the detachment's open case logs and

placed on its closed case logs. The detachment's Time Spent section becomes accessible to the "parent" unit for changes. A second Time Spent section appears on the MIAR for the "Parent" unit to log its own person hours. These hours must contain some administration hours.

- (5) Progressive Inspections. An MIAR may be passed from one unit to another. However, a progressive inspection is limited to the following inspection types:

- (a) Initial or Reissue Certificate of Inspection
- (b) Reinspection
- (c) Hull Exams
- (d) Certificate of Compliance.

The inspection types must be indicated on MISF with an "X" in the Progressive data slot. The inspection types are mapped from MISF to MIAR and are locked.

Anytime during the update of the progressive inspection report, the controlling port may file supplements for requirements, special notes, and certificate amendments, or may change the inspection status details before passing the case. Only the validating port must complete all required supplements.

The port that validates the progressive inspection will be listed in MSIS as the Port of Certification (POC) for Initial Certification and Certification. If the port is a detachment, the MIAR must be passed to the "parent" unit by putting an "X" in the Pass To slot. The port code will be filled with the "parent" unit's code and locked.

The following activities occur when a case is passed from one port to another:

1. An entry is made on the receiving port's list of scheduled inspections (MISI) and a portion of MISF is updatable for that port.
2. An entry is made on the receiving port's log of open cases, MISPL.
3. The entry on the sending port's open case log, MISPL, will be deleted.
4. An entry is made on the sending port's closed case log, MIPL.

5. The entry on the vessel's open case log, VFOC, is updated with the receiving port.
6. PFAS and PFMI are updated accordingly for both ports.
7. Inspection status summary, MISS, is updated with the receiving port.
8. A Morning Report is sent to the receiving port when the case is passed, to provide notification.
9. A new resource supplement is attached to the MIAR for the receiving port to report its hours expended.
10. Previous resource supplements are saved. They may be viewed by requesting MIAR in retrieval mode.
11. All MIAR supplements are controlled by the receiving port.
12. If the case is passed to an incorrect port, that port must log administrative hours and then may pass the case to the correct port. The same log entries will be made as with a case that was passed to the correct port.
13. Each port having possession of the case is required to enter their time spent on the case.
14. All log entries will show the correct inspection type, with a **"P"**, for progressive, as the first letter.

WIT	WITHDRAW	

(3) INSPECTION TYPE

<u>CODE</u>	<u>MAP</u>	<u>EXPLANATION</u>
ADM	ADMIN	ADMIN TYPE CASES NOT COVERED BY OTHER AREAS, AFFECTING THE STATUS OF THE COI WITHOUT SHOWING INSPECTION ACTIVITY
ANN	ANNUAL	OFFSHORE PLATFORM ANNUAL EXAMINATION
CGV	CG VESSEL/EQP	ALL CVS INSPECTION WORK PERFORMED FOR OTHER COAST GUARD PROGRAMS ON COAST GUARD VESSELS OR EQUIPMENT
COC	COC	CERTIFICATE OF COMPLIANCE EXAM: CONTROL VERIFICATION ON PASSENGER VESSELS, TANK VESSEL EXAMINATIONS, OR LETTER OF COMPLIANCE EXAMS
COI	CERTIFICATION	INSPECTION DONE PRIOR TO ISSUANCE OF A COI TO A PREVIOUSLY CERTIFICATED VESSEL
CON	CONTROL VERIF	SOLAS CONTROL VERIFICATION
DAM	DAMAGE SURVEY	DAMAGE SURVEY NOT INVOLVING A CREDIT DRYDOCK EXAM
DDE	DD EXTEND	EXAM CONDUCTED TO SUPPORT DECISION TO EXTEND DRYDOCK INTERVAL
DEF	DEFICIENCY CK	DEFICIENCY CHECK - FOLLOW UP ON OUTSTANDING CG-835 OR RESPONSE TO REPORTED DEFICIENCY. (EXCEPT HOTLINE RESPONSES)
EXC	EXCURS PERMIT	INSPECTIONS ASSOCIATED WITH ISSUANCE OF AN EXCURSION PERMIT

TABLE 3-3. CODE VALUES FOR MIAR (Continued)

(3) INSPECTION TYPE (Continued)

<u>CODE</u>	<u>MAP</u>	<u>EXPLANATION</u>
EYE	OVERSIGHT	OVERSIGHT OF OTHER AGENCIES NOT INVOLVING NEW CONSTRUCTION
FPR	FIRE PROTECTN	FACTORY EXAMINATIONS INVOLVING INSPECTIONS FOR FIRE PROTECTION EQUIPMENT
GOV	OTHER GOVT	INSPECTIONS OF VESSELS FOR OTHER GOVERNMENT AGENCIES
HOT	HOTLINE	INSPECTION WORK PERFORMED PURSUANT TO COMPLAINTS OR NOTIFICATIONS RECEIVED VIA THE HQ 800 HOTLINE. IF ANY OTHER KIND OF INSPECTION RESULTS FROM THE INSPECTION DONE IN IMMEDIATE RESPONSE TO A HOTLINE NOTIFICATION, A HUL FOR EXAMPLE, ENTER THE TIME EXPENDED ON THE IMMEDIATE AS HOT AND ENTER THE SUBSEQUENT INSPECTION UNDER THE APPROPRIATE CATEGORY. HOT IS A SPECIAL CASE OF DEF.
HUL	HULL EXAM	CREDIT DRYDOCK EXAMINATION - INCLUDES ALL ALTERNATIVE FORMS OF CREDIT DRYDOCKINGS SUCH AS UNDERWATER SURVEYS OR ALTERNATE INTERNALS IN LIEU OF HUL. A HUL ENTRY IS REQUIRED FOR A CREDIT DRYDOCK EXAM CONDUCTED IN CONJUNCTION WITH A COI IN ADDITION TO THE ENTRY FOR COI.
ICN	CONSTRUCTION	INITIAL CONSTRUCTION - EXCLUDING OVERSIGHT. THIS INCLUDES HOURS EXPENDED FOR EXAMINATIONS MADE DURING ACTUAL CONSTRUCTION OR ASSEMBLY OF COMPONENT MODULES INTO COMPLETE VESSEL SYSTEMS.
ICO	CONSTRUCT O/S	INITIAL CONSTRUCTION OVERSIGHT OF THIRD PARTY ASSOCIATIONS DURING ASSEMBLY OF COMPONENTS INTO COMPLETE VESSEL SYSTEMS.
INI	INITIAL CERT	INITIAL CERTIFICATE OF INSPECTION - EXCLUDING RE-FLAGGINGS AND OVERSIGHT OF THIRD PARTIES. THIS INCLUDES CERTIFICATIONS ASSOCIATED WITH NEW CONSTRUCTION AND CONVERSIONS, I.E., ANY INSPECTION LEADING TO THE ISSUANCE OF A CERTIFICATE TO A VESSEL FOR THE FIRST TIME. DO NOT INCLUDE HOURS REPORTED UNDER THE HEADING OF INITIAL CONSTRUCTION.

(3) INSPECTION TYPE (Continued)

<u>CODE</u>	<u>MAP</u>	<u>EXPLANATION</u>
INV	INVESTIGATIVE	HOURS SPENT CONDUCTING INVESTIGATIVE FUNCTIONS ON OFFSHORE PLATFORMS
LJA	LIFE JACKET	FACTORY EXAMINATION ASSOCIATED WITH APPROVAL OF LIFE JACKETS
LOT	L/S SVC OTH	FACTORY EXAMINATION ASSOCIATED WITH LIFE SAVING EQUIPMENT OTHER THAN LIFE JACKETS AND ANNUAL INFLATABLE LIFERAFTS
LRA	LIFERAFT SVC	FACTORY EXAMINATION OF VESSEL MACHINERY, ANNUAL EXAMINATION OF INFLATABLE LIFERAFTS
MAC	MACHINERY	FACTORY EXAMINATION ASSOCCAIATED WITH E.G., RELIEF VALVES
MAR	MARPOL	INSPECTION NOT ASSOCIATED WITH ANY OTHER INSPECTION TYPE
MPR	MARPOLII PR	MARPOL PLAN REVIEW
MPS	MARPOLII SURV	MARPOL SURVEY
MPT	MARPOLII TEST	MARPOL TEST
OTH	OTHER	INSPECTION NOT COVERED ELSEWHERE. DETAILS OF INSPECTION, I.E., SCOPE, SHALL BE ENTERED INTO THE NARRATIVE SECTION OF THE MIAR
PAC	PERS-IN-ADD	EXAMINATION OF FOREIGN VESSELS IN SUPPORT OF AUTHORITY TO CARRY PERSONS IN ADDITION TO CREW
PRT	PLANREV TBOAT	TIME ASSOCIATED WITH PLAN REVIEW OF A SUBCHAPTER T VESSEL, DIRECTLY LINKED TO A SPECIFIC VESSEL
PTP	PERM-PROCEED	SPECIAL INSPECTION TYPE USED TO REFLECT ISSUANCE OF A PERMIT TO PROCEED. NULLIFIES INSPECTION STATUS ON VFLD, MISS, AND MICP TO REFLECT PERMIT TO PROCEED ISSUANCE
REP	REPAIRS	EXAMINATION OF REPAIRS
RFG	REFLAGGING	REFLAGGING

TABLE 3-3. CODE VALUES FOR MIAR (Continued)

(3) INSPECTION TYPE (Continued)

<u>CODE</u>	<u>MAP</u>	<u>EXPLANATION</u>
RIN	REINSPECTION	HOURS ASSOCIATED WITH PERIODIC REINSPECTION OF A VESSEL, E.G., MID-PERIOD
SAN	SANITARY INSP	SANITARY INSPECTIONS NOT PERFORMED IN CONJUNCTION WITH ANY OTHER INSPECTION
SPO	SPOT CHECK	A BRIEF SURVEY OF SAFETY CONDITIONS ON OFFSHORE PLATFORMS
UFV	UNINSP FISHG	UNINSPECTED FISHING VESSELS
UNV	UNINSP-OTHER	OTHER UNINSPECTED VESSELS
UTV	UNINSP TOWING	UNINSPECTED TOWING VESSELS
WEL	WELDER QUAL	FACTORY EXAMINATION FOR WELDER/WELDING PROCEDURE CERTIFICATION

TABLE 3-3A. EXPLANATIONS OF TIME SPENT

<u>CODE</u>	<u>EXPLANATION</u>
HULL	ALL ONBOARD TIME EXPENDED FOR THE INSPECTION BY HULL INSPECTORS. ALSO ALL T-BOAT, BARGE, PLATFORM, AND OTHER INSPECTIONS WHICH ARE NOT IDENTIFIED AS STRICTLY HULL OR MACHINERY WORK. THIS INCLUDES TIME FOR UNSUPERVISED TRAINEES DOING THESE INSPECTIONS.
MACH	ALL ONBOARD TIME EXPENDED FOR THE INSPECTION BY BOILER INSPECTORS ON PROPULSION AND AUXILIARY MACHINERY, PRESSURE VESSELS, PIPING AND ELECTRICAL SYSTEMS, ETC. THIS INCLUDES TIME FOR UNSUPERVISED BOILER TRAINEES.
TRAIN	THE TOTAL ONBOARD TIME EXPENDED FOR THE INSPECTION BY ANY SUPERVISED TRAINEES.
EXTRA	TOTAL TIME EXPENDED FOR EXTRAORDINARY DELAYS BY ALL QUALIFIED INSPECTORS ON THE INSPECTION. EXTRA TIME INCLUDES TIME CONSUMED BY UNUSUAL DELAYS OR OTHERWISE LOST, USUALLY ASSOCIATED WITH TAD TRAVEL; E.G., TIME LOST IN A FOREIGN YARD BECAUSE THE VESSEL WAS NOT READY AND THE INSPECTOR COULD NOT LEAVE. THIS INCLUDES ALL TIME BETWEEN DEPARTURE ON AND RETURN FROM TAD, AS STATED ON THE TRAVEL CLAIM, LESS ALL TIME ACCOUNTED ELSEWHERE.
EXTRN	TOTAL TIME EXPENDED FOR EXTRAORDINARY DELAYS BY ALL TRAINEES ON THE INSPECTION.
ADMIN	ADMINISTRATIVE TIME EXPENDED BY ALL INSPECTORS AND TRAINEES. IT IS ALL TIME EXPENDED BY THE INSPECTOR PREPARING TO CONDUCT AN INSPECTION AND REPORTING THE RESULTS. IT INCLUDES: RESEARCHING FILES, REGULATIONS, MSIS, MARINE SAFETY MANUAL, NVC'S, ETC.; COMMUNICATIONS WITH OTHER UNITS AND MAKING ARRANGEMENTS WITH VESSEL OWNERS/OPERATORS; ENTERING MSIS DATA AND GENERATING COI'S AND OTHER DOCUMENTS; WRITING INSPECTION BOOKS AND REPORTS, DISCUSSIONS WITH SUPERVISORS OR COLLEAGUES REGARDING THE INSPECTION; MAKING TRAVEL ARRANGEMENTS INCLUDING INNOCULATIONS, PASSPORTS, VISAS; AND PREPARING TRAVEL CLAIMS. "PARENT COMMANDS SHOULD ENTER ADMIN HOURS ASSOCIATED WITH THE REVIEW AND VALIDATION OF DETACHMENT CASES".
TRAVEL	TOTAL TRAVEL TIME EXPENDED FOR THIS INSPECTION BY ALL QUALIFIED INSPECTORS. IT IS THE TIME SPENT ENROUTE TO AND FROM THE INSPECTION SITE, BY WHATEVER MODE. WHEN TRAVEL TIME SUPPORTS BOTH CVS AND NON-CVS MISSIONS, THE INSPECTOR MUST ALLOCATE (APPROXIMATELY) THE TOTAL TRAVEL TIME INTO CVS AND NON-CVS PROPORTIONS. THE CVS PORTION SHOULD BE ENTERED ON THE MIAR. THE REMAINDER SHOULD BE ENTERED ON THE APPROPRIATE ACTIVITY REPORT(S) FOR THE NON-CVS MISSIONS. WHEN SEVERAL CVS INSPECTIONS

TABLE 3-3A. EXPLANATIONS OF TIME SPENT (Continued)

<u>CODE</u>	<u>EXPLANATION</u>
TRAVEL (CONT'D)	ARE DONE CONSECUTIVELY, TRAVELLING FROM SITE TO SITE, OR AT THE SAME SITE, AVERAGE THE TOTAL TIME FOR ALL THE JOBS AND ASSIGN THE AVERAGE TO EACH INSPECTION. TRAVEL TIME TO AND FROM WORK, EITHER AT THE OFFICE OR FOR SHIPYARD RESIDENTS, SHOULD BE REPORTED ONLY WHEN IT EXCEEDS ONE ROUND TRIP PER NORMAL WORK DAY; I.E., REPORT ALL LOCAL TRAVEL BEYOND ONE NORMAL COMMUTING ROUND TRIP PER DAY. FOR TAD, ADD TIME EXPENDED AWAITING CHANGE OF MODE, FLIGHT, OR CARRIER AT INTERMEDIATE STOPS.
TRNTVL	TOTAL TIME EXPENDED FOR THIS INSPECTION BY ALL TRAINEES.

5.	ADMIN	no others allowed			
6.	Any combination of remaining types as long as they are unique.				

**TABLE 3-6. IMPACT ON OTHER PRODUCTS OF FILING
AND VALIDATING MIAR**

After Filing an MIAR:

VFOC - entry made on open case log for vessel
FFOC - entry made on open case log for platform
MISP - entry made on open case log for port
MISI - entry deleted on the list of scheduled inspections for that port
VFLD - status is changed to a case number to indicate an inspection is in process for INIT/CERT, CERT, or COC.
PFAS - updates current open for port
PFMI - updates current open for inspection types
MISS - inspection status updated from scheduled to open
MIOI - remove entry on overdue inspections as applicable (COI removes Certificate and /or Reinspection entries from MIOI; RIN removes Reinspections and HUL removes Hull Exam entries.)

After Validating an MIAR:

VFOC - entry deleted on open case log for vessel
FFOC - entry deleted on open case log for facility
MISP - entry deleted on open case log for port
VFMI - entry made on closed case log for vessel
VFCG - entry made on contact log for vessel
MIPL - entry made on closed case log for port
VFLD - document status updated if necessary
PFMR - A Morning report for platforms is tickled, for an inspection type of annual, one year from the inspection date.
PFAS - activity summary update as pertinent
PFMI - inspection activities updated
MISS - inspection status moves "current status" to "last & next" and OTHER inspection types get deleted.
LETTERS - get tickled (for more information on the generation of letters, see Section 7.5 in this guide).

MIAR/Entry/Entering An Inspection Report

D. Marine Inspection Deficiency Report -- **MIDR.**

1. **MIDR Purpose and Description.**

- a. Documents and controls the status of deficiencies found during the inspection of a vessel or facility.
- b. Provides the number of blank deficiency forms indicated on MIAR.
- c. Is filed when a deficiency is allowed to remain outstanding.
- d. Is filed when a deficiency affected the safety integrity of the vessel, whether or not it remained outstanding at the completion of the inspection.
- e. Generates an MILIR or MIILN letter to the vessel's operator notifying him/her of outstanding requirements.
- f. Posts counts of deficiencies to Marine Inspection Critical Profile (MICP) and Marine Inspection Activity Report (MIAR).
- g. Generates an entry on the Morning Report for the Port of Certification (if not the port entering the deficiency) and any ports entered in the Notify slot(s).
- h. Figure 3-3 shows the data definitions for MIDR. See Table 3-7 for the code values and Enclosure (1) for the abbreviation meanings.
- i. The uses of MIDR are illustrated in the following example sequences entitled: Entering a Deficiency Report and Correcting or Adding to a Deficiency Report.

2. **Accessing MIDR.**

- a. Menu. MIDR is normally accessed through MIEI.
- b. Free-Form. MIDR can be accessed through free-form with:

-MIDR,<E, U, or R>,CASE=<inspection case number>

where:

E = entry mode

U = update mode

R = retrieval mode

CASE = inspection case number

Please Note: CASE=ADMIN is not available to the user.

EXAMPLE:

-MIDR,U,CASE=MI86000016

- c. Selection From Other Products. MIDR may be accessed from MIAR.
- d. Product Use Authority Levels.

Retrieval – 1 Entry/Update - 2 and logged in
port is equal to the port initiating the case.

3. **MIDR Data Entry Requirements and Explanation.**

- a. General Processing. In **E(ntry)** mode, MIDR is accessed by selection from MIAR or through MIEI, using the Inspection Case Number. The number of blank deficiency forms displayed is the same as the number requested on the controlling MIAR. The user enters the data items and the deficiency status for each deficiency being reported. If a deficiency is outstanding, the user must also enter compliance and prompt dates. The compliance date is the date by which an outstanding deficiency is to be corrected. The prompt date is the date on which a letter is to be sent to the vessel's operator notifying him of the outstanding deficiency.

At anytime prior to validation of the inspection case, the initiating unit can correct, delete, or add to a deficiency using **U(pate)** mode. After validation, changes in the deficiency status can only be accomplished using MIDF. MIDR can not be changed after the controlling MIAR has been validated.

MIDR may also be accessed in **R(etrieval)** mode to view the deficiency report filed on a vessel or facility specified by an inspection case.

- b. Special Processing. When an item (IDENT) marked "ITEMS NOT INSPECTED" is cleared, it is deleted from MIDR. However, the count of deficiencies remains the same so that the count and the actual number of items may not be the same.

E. Marine Inspection Deficiency Follow-up -- MIDF.

1. MIDF Purpose and Description.

- a. Permits the recording of follow-up actions concerning deficiencies found during an inspection performed on a particular vessel or facility.
- b. Is displayed and used as an add-on to a specific deficiency previously identified on MIDR.
- c. Displays either vessel or facility identifying information, depending on whether the follow-up concerns a vessel or facility.
- d. Generates morning report entries for those ports listed in the Notify slots on MIDF.
- e. Automatically generates a Morning Report entry to the issuing port when a follow-up is filed by another port.
- f. Prompts the generation of a new Marine Inspection Letter of Extension of Requirements (MILER) letter if the follow-up extends the deficiency compliance date.
- g. Resets the generation dates for the Marine Inspection Initial Letter of Non-Compliance (MILLN) and the Marine Inspection Final Letter of Non-Compliance (MIFLN) letters if the prompt date is changed.
- h. Writes the MIDF comments to MIDR when the deficiency is cleared.
- i. Figure 3-4 shows the data definitions for MIDF. See Table 3-8 for the code values and Enclosure (1) for the abbreviation meanings.
- j. The use of MIDF is illustrated in the following example sequence entitled: Entering a Follow-up Report to an Outstanding Requirement.

2. Accessing MIDF.

- a. Menu. MIDF is normally accessed through MIEI.
- b. Free-Form. MIDF can be accessed through free-form with:

-MIDF,R,CASE=<inspection case number>*

where:

R = retrieval mode
CASE = inspection case number

- In **E(ntry)** and **U(Ddate)** modes, MIDF must be accessed through MIEI.

EXAMPLE: **-MIDF,R,CASE=MI86000342**

- c. Selection From Other Products. MIDF is not accessed from other products.
 - d. Product Use Authority Levels. Retrieval - 1 Entry - 2
3. **MIDF Data.** Entry Requirements and Explanation.
- a. General Processing. MIDF is accessed through MIEI. MSIS responds with a special MIEI screen containing twenty (20) lines which requires the user to enter the IDENTs and Case Numbers for the follow-ups to be filed. If the Case Number is the same for multiple deficiencies, the user need only enter it on the first line of the group of IDENTs being entered. The user presses **SEND** to receive MIDF(s). (If more than one Case Number or IDENT is identified, the MIDFs will be queued up in a series.) Each MIDF is displayed with the deficiency definition, including current status information, all previously filed follow-up actions (if any) and a blank follow-up paragraph. When a deficiency is cleared, comments from the follow-up are written to MIDR. MIDF does not clear a Port Safety Discrepancy.
 - b. Special Processing. MIDF may be updated by ports other than the issuing port. However, the only permissible actions are to enter comments or to clear the deficiency.

F. Marine Inspection Special Notes -- MISN.

1. MISN Purpose and Description.

- a. Allows for the entry, update and retrieval of a vessel or platform's special inspection notes.
- b. Displays either vessel or platform identifying information, depending on whether the special note concerns a vessel or a platform. MISN is not used with factories.
- c. Maps this information to the Marine Inspection Critical Profile, MICP.
- d. Generates a morning report message to the issuing unit when a special note is set to expire.
- e. Keeps the special note in MSIS by Case Number after it expires, but does not list it on the vessel or platform's MICP. It may be retrieved through its associated MIAR.
- f. Figure 3-5 shows the data definitions for MISN. See Enclosure (1) for the abbreviation meanings.
- g. The use of MISN is illustrated in the following example sequence entitled: Entering a Special Note.

2. Accessing MISN.

- a. Menu. MISN may be accessed through MIEL.
- b. Free-Form. MISN can be accessed through free-form with:

-MISN,<E, U, or R>,CASE=<inspection case number>

where:

E = entry mode

U = update mode

R = retrieval mode

CASE = inspection case number

EXAMPLE:

-MISN,U,CASE=MI8600561

- c. Selection From Other Products. MISN can be accessed from MIAR.

d. Product Use Authority Levels.

Retrieval – 1 Entry/Update - 2 and logged in port
code is equal to the port initiating the case.

3. MISN Data Entry Requirements and Explanation.

- a. General Processing. MISN may be accessed in **E(ntry)** mode through MIEI using either a vessel's VIN or a platform's FIN. MISN responds with any special notes currently on file for the vessel or platform, together with a blank paragraph for the user to enter another note. The number of blank paragraphs provided is determined by the number requested on MIAR.

The period of existence for a special note is specified in the Retain Until slot. MISN tickles prompter memos to the initiating unit for each note it entered. The first memo is generated 10 days before the retention date and the second is generated 5 days later. When a special note expires, it is kept in the MSIS database by Case Number, but is not listed on the vessel or platform's MICP.

MISN may be accessed in **U(pdate)** mode to either extend a retention date or change the information entered by the user's unit. Any notes entered by a unit other than the user's are locked to updating by the user. (Once the associated MI case has been validated, the special note is locked to further updates except for the Retain Until date.)

MISN may also be accessed in **R(etrieval)** mode to view any special notes attached to a particular case; however, the user should use MICP to retrieve all special notes currently attached to a specific vessel or platform. A user may see all class notes, both current and historical by using CASE=ADMIN, with a preset VIN or FIN.

- b. Special Processing. None.

G. Marine Inspection Class Note -- MICN.

1. MICN Purpose and Description.

- a. Captures and displays information concerning the inspection notes that pertain to a vessel class.
- b. Copies the class note, in the form of a Marine Inspection Special Note, to the files of every vessel in that class.
- c. Displays the information in the special notes paragraph in MICP for each vessel in the class.
- d. Tickles expiration prompter memos to the initiating port for each class note for each vessel in that class via Port File Morning Report (PFMR).
- e. Figure 3-6 shows the data definitions for MICN. See Enclosure (1) for the abbreviation meanings.
- f. The use of MICN is illustrated in the following example sequence entitled: Entering a Class Note.

2. Accessing MICN.

- a. Menu. MICN is normally accessed through MIEI.
- b. Free-Form. MICN can be accessed through free-form with:

-MICN,<E, U, or R>,CIN=<class identification number>

where:

E = entry mode

U = Update mode

R = retrieval mode

CIN = class identification number

EXAMPLE:

-MICN,E,CIN=SC000001

- c. Selection From Other Products. MICN is not accessed from other products.
- d. Product Use Authority Levels.

Entry - 3 and logged in port code is equal to the originating special class port code.

3. **MICN Data Entry Requirements and Explanation.**

- a. **General Processing.** MICN can only be accessed in E(ntry) mode, using a vessel's CIN. (Class notes may only be created by the unit that created the class.) MICN responds with a blank for a Retain Until date and a blank paragraph for the user to enter a class note. (Please note, the Retain Until date must be later than the date the note is being entered.) MICN then copies the class note to the special notes paragraph in MICP and to MISN for each vessel in the class. MICN also tickles morning report entries to the initiating port for each class note for each vessel in that class. On the Retain Until date, a morning report entry is generated for the initiating port as a reminder that the special note will be automatically deleted unless action is taken prior to a specified date. Five days later, a second memo is generated for the same MISN as a reminder that automatic deletion will occur. The user may extend the retention date or delete a note by blanking out the paragraph on MISN (Marine Inspection Special Notes) for each vessel individually. To update an MISN created by MICN, the user must use CASE=ADMIN. This will bring up those special notes that do not have a case number otherwise associated with them.
- b. **Special Processing.** None.

H. Marine Inspection Special Examination -- MISE.

1. MISE Purpose and Description.

- a. Allows the user to record the status of a special examination, including comments.
- b. Maps the most recent MISE data to the vessel's MISS, Marine Inspection Status Summary and PSVH, Port Safety Vessel History.
- c. Displays all MISEs filed on a vessel on MICP, Marine Inspection Critical Profile.
- d. Displays all MISEs issued for a vessel in the MICP section on MIPIP, Marine Inspection Pre-Inspection Package.
- e. Figure 3-7 shows the data definitions for MISE. See Table 3-9 for the code values and Enclosure (1) for the abbreviation meanings.
- f. The use of MISE is illustrated in the following example sequence entitled: Entering a Special Examination.

2. Accessing MISE.

- a. Menu. MISE is normally accessed through MIEL.
- b. Free-Form. MISE can be accessed through free-form with:

-MISE,<E, U, or R>,CASE=<inspection case number>

where:

E = entry mode

U = update mode

R = retrieval mode

CASE = inspection case number

EXAMPLE:

-MISE,U,CASE=MI87000741

- c. Selection From Other Products. MISE can be accessed from MIAR.
- d. Product Use Authority Levels.

Retrieval – 1

Entry/Update - 2 and port code
must be the same as the one who initiated the case.

3. MISE Data Entry Requirements and Explanation.

- a. General Processing. The user accesses MISE through MIEI, using the case number of an open MI case. (The user's port code must also match the port code that initiated the case.) MISE responds with a form containing the examination status type, case identifier, action port, date of entry, the actual status, the existence of outstanding deficiencies and three lines for comments. The user then enters the special examination information and presses **SEND**.

The user may access MISE in **U(pdate)** mode to make corrections or additions to an existing MISE. The user may delete an MISE by placing an "X" in the DELETE slot that appears at the bottom of the screen. The user's port code must match the port code that initiated the case in order to modify existing data or delete the MISE. Also, the case must be an open MI case; once the associated MI case has been validated, the special examination data is locked to further updates.

MISE may also be accessed in **R(etrieval)** mode through MIEI to see special examination data for a particular vessel.

Please Note: There may be only one MISE filed per MI case and two MISEs may not be filed at the same time. An open MI case with an MISE attached must be closed before an MISE for another case can be filed.

The most recently filed special examination may be retrieved by using MISS or PSVH. This is based on the date the MISE was filed and not the MI case date. Users should use care and not delay the filing of an MISE as they may prevent the most recent MISE from being displayed.

- b. Special Processing. If the examination type MARPOLII is entered on MIAR, the Type, Case, and Port are mapped from MIAR to MISE. These slots are then locked to the user.

CHAPTER 4. MARINE INSPECTION STATUS

- A. General. There are three products which provide inspection status information. The Marine Inspection Status Summary (MISS) summarizes inspection information including the status of all required periodic inspections and the status of all required safety or regulatory documents for a vessel or platform. Marine Inspection Status Details (MISD) is used to record inspection dates for inspections performed on vessels. The Marine Inspection Critical Profile (MICP) displays significant information needed to assess the inspection/safety status of a vessel or platform including inspection notes.

- B. Marine Inspection Status Summary -- **MISS.**

1. **MISS Purpose and Description.**

- a. Provides a summarization of inspections and inspection-related items pertaining to a particular vessel or platform. (MISS is not used with factories.)
- b. Displays a count of inspection critical items: current inspection notes, certificate amendments in force, special design features, outstanding requirements, and VPI notices in force.
- c. Displays a list of all periodic inspections and any other inspection that is scheduled or open, with their associated dates.
- d. Identifies and displays the status of all required safety or regulatory documents for a vessel.
- e. Acts as a menu to the detailed products MICP, MISD and VFLD.
- f. Displays information from the following products: PSPI, MISN, MIDR, MICA, MISD, MISE, VFLD and VFDD.
- g. Figure 4-1 shows MISS as it appears on the terminal.

2. **Accessing MISS.**

- a. **Menu.** MISS is normally accessed through MIEI.
- b. **Free-Form.** MISS can be accessed through free-form with:
-MISS,<E, U, or R>,VIN=<vessel identification number
or
-MISS,<E, U, or R>,FIN=<facility identification number>

where:

E = entry mode

U = update mode

R = retrieval mode

VIN = vessel identification number

FIN = facility identification number

EXAMPLE:

-MISS,R,VIN=CG000692

Please Note. The mode has no meaning when requesting MISS. If a user with a password authority access level of 2 for MISS uses the **SELECTION** command or had free-formed to MISS, with either **U(pdate)** or **E(ntry)** mode, then **U(pdate)** mode will be carried to MICP, MISD or VFLD.

- c. Selection From Other Products. MISS is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. MISS Data Entry Requirements and Explanation.

- a. General Processing. MISS is created by MSIS from details submitted in other products in both the Marine Inspection and Vessel File product sets. MISS can only be accessed in **R(etrieval)** mode using a vessel's VIN or a platform's FIN. However, if a user with an MISS password authority of 2 or higher free-forms to MISS in either **E(ntry)** or **U(pdate)** mode, then **U(pdate)** mode is carried to MICP, MISD, or VFLD. MISS responds with basic information about the vessel or platform and three status summary information sections. (Platforms show only two sections since they do not have a list of documents.) These sections are:

- 1. Summary of Inspection Critical Items
- 2. Periodic Inspection Status
- 3. Safety/Regulatory Document Status.

Using the **SELECT** feature, each of these sections may be accessed from MISS to see more detailed information than that presented in the summary paragraphs.

Please Note: The ACTION slot under CURRENT STATUS lists the open case number for each type of inspection. A plain case number indicates that the inspection has been scheduled, a * before the case number indicates that a MIAR is "In Process" while a - indicator means that the MIAR is "Complete". When the case has been validated, the three data slots under CURRENT STATUS will be blank and the inspection date and port code for the port that completed the inspection will appear in the Periodic Inspection Status section.

- b. Special Processing. None.

FIGURE 4-1. DATA DEFINITIONS FOR MISS

C. Marine Inspection Status Details -- MISD.

1. MISD Purpose and Description.

- a. Permits the recording of inspection dates for inspections performed on vessels. (MISD is not used with platforms or factories.
- b. Maps inspection information to MIPIP, Marine Inspection Pre-Inspection Package and to MICIF, Marine Inspection Certificate of Inspection Form.
- c. Figure 4-2 shows the data definitions for MISD. See Table 4-1 for the code values and Enclosure (1) for the abbreviation meanings.
- d. The use of MISD is illustrated in the following example sequence entitled: Entering Inspection Status Details.

2. Accessing MISD.

- a. Menu. MISD is normally accessed in E(ntry) mode through MIAR. In R(etrieval) mode, MISD is normally accessed through MIEI.
- b. Free-Form. MISD can be accessed through free-form with:

-MISD,<E r U>,CASE=<inspection case number>

or

-MISD,R,VIN=<vessel identification number>

where:

E = entry mode

U = update mode

R = retrieval mode

CASE = inspection case number

VIN = vessel identification number

Please Note: CASE=ADMIN will not work.

EXAMPLE:

-MISD,U,CASE=MI86000759

- c. Selection From Other Products. MISD can be accessed from MIEI and MIAR.

d. Product Use Authority Levels.

Retrieval – 1 Entry/Update - 2 and logged in port code is equal to the port initiating the case.

3. **MISD** Data Entry Requirements an Explanation.

- a. General Processing. MISD may be accessed in **E(ntry)** or **U(pdate)** mode through MIAR to see open case information. **An MIAR must be filed before MISD is available for update.** MISD displays slots for the next due dates for periodic inspections and the last exam dates for hull exams. MISD also maps data from the Vessel File detail products, if this data exists. The user then enters the appropriate data. Slots for periodic inspections on MISD may be open or locked, optional or required, depending on the inspection type marked on MIAR. Table 4-2 shows the state of the various MISD slots based on these MIAR inspection types.

MISD may also be accessed in **R(etrieval)** mode through MIEI to see the inspection data for a particular vessel.

In **E(ntry)**, **U(pdate)** or **R(etrieval)** mode, MISD may be longer than one screen image. When the first screen image for MISD is displayed, the user receives the message "KEY MORE FOR NEXT PAGE" in the Response Slot if there is additional information. The user enters **MORE** in the Command Slot and presses **SEND** to display the next page. The user may also send a blank in the Command Slot or **ABORT** to exit MISD without viewing the next page.

The MARPOLII section will only be displayed in **R(etrieval)** mode when data for MARPOLII stripping tests exists.

- b. Special Processing. None.

D. Marine Inspection Critical Profile -- **MICP.**

1. **MICP Purpose and Description.**

- a. Provides a summary of critical information pertaining to a particular vessel or platform's material condition. (MICP is not used with factories.)
- b. Displays a summary of the number of current inspection notes, certificate amendments in force, special design features, outstanding requirements, and VPI notices issued for a vessel.
- c. Displays more in-depth information about each of the above items, including narrative.
- d. Displays information from the following products: PSPI, MISN, MIDR, MICA, MISD, MISE, and VFDD.
- e. e. Figure 4-3 shows MICP as it appears on the terminal.

2. **Accessing MICP.**

- a. Menu. MICP is normally accessed through MIEL.
- b. Free-Form. MICP can be accessed through free-form with:

-MICP,R,VIN=<vessel identification number>

or

-MICP,R,FIN=<facility identification number>

where:

R = retrieval mode

VIN = vessel identification number

FIN = facility identification number

EXAMPLE:

-MICP,R,VIN=CG000279

- c. Selection From Other Products. MICP can be accessed from MISF or MISS.
- d. Product Use Authority Levels.

Retrieval - 1

3. **MICP Data Entry Requirements and Explanation.**

- a. General Processing. MICP is a retrieval-only product. It is accessed using either a VIN for vessels or a FIN for platforms. When accessed, MICP displays special design features from VFDD, inspection notes from MISN, all outstanding requirements from MIDR, current certificate amendments from MICA, VPI notices from PSPI, and special examination information from MISE.

MICP may contain more than one screen image (50 lines) of information. When the first screen image for MICP is displayed, the user receives the message "KEY MORE FOR NEXT PAGE" in the Response Slot if more information exists. The user enters MORE in the Command Slot and presses SEND to see the next page. The user may also SEND a blank command or ABORT to exit MICP without viewing the next page.

- b. Special Processing. None.

CHAPTER 5. PORT STATUS LOGS.

- A. General. The Marine Inspection product set contains a group of logs and lists which support the inspection activity, namely the Marine Inspection List of Scheduled Inspections (MISI), Marine Inspection Status at Port (MISP), Marine Inspection Port Log (MIPL), Marine Inspection List for Fleet of Responsibility (MIFR), and Marine Inspection List of Overdue Inspections (MIOI). MISI displays currently scheduled inspections for the subject unit. MISP displays open case summaries while MIPL displays closed case summaries. The vessels in the unit's fleet of responsibility are shown on MIFR. MIOI displays information about vessels and planned periodic inspections which are overdue at the port.

- B. Marine Inspection List of Scheduled Inspections -- MISL.

1. **MISI Purpose and Description.**

- a. Provides a list of scheduled MI cases for vessels, platforms and factories attached to a given port.
- b. Lists each case by Case Number, subject name, VIN/FIN, inspection date and the inspection type. (MISI lists the first two inspection types listed on MISF.)
- c. Provides an automatic mechanism for locating and managing scheduled cases within a given port or field unit.
- d. May be used to select MISF or MIAR (depending on the mode used to access MISI).
- e. Used to queue up MIPIP packages for printing the next day, when accessed in **R(etrieval)** mode.
- f. Figure 5-1 shows MISI as it appears on the terminal.

2. **Accessing MISI.**

- a. **Menu.** MISI is normally accessed through MIEI.
- b. **Free-Form.** MISI can be accessed through free-form with a unit or port code as follows:

-MISI,<E, U, or R>,UNIT=<unit or port code>

where:

E = entry mode

U = update mode

R retrieval mode

UNIT = unit or port code

NOTE: MISI is a retrieval product, but mode determines how the product is processed.

EXAMPLE:

-MISI,U,UNIT=CORMS

- c. **Selection From Other Products.** MISI is not accessed from other products.
- d. **Product Use Authority Levels.**

Retrieval – 1

Select MISF and MIAR in Update - 2

Select Pre-Inspection Packages - 1

3. MISI Data Entry Requirements and Explanation.

- a. General Processing. MISI is accessed through MIEI with a port designation; default is the user's port. (In **E(ntry)** and **U(pdate)** modes, MISI can be accessed only for the user's port.) MISI responds with a list of scheduled MI cases and serves as an index to those cases. If MISI is entered in **E(ntry)** or **U(pdate)** mode, selections made from it result in MIAR(s) in **E(ntry)** mode, if the user's port is the same as the initiating port and the user has update authority for MIAR. If the user's port is different or he/she does not have the proper authority, the user receives MISF in retrieval mode. If MISI is entered in **R(etrieval)** mode, selections from it result in MISF in **U(pdate)** mode, if the user's port is the same as the initiating port and the user has update authority for MISF. If these conditions are not met, the user receives MISF in **R(etrieval)** mode. (See Table 5-1 for the logic of product selection from MISI.)

MISI may also be used to queue up MIPIP packages for printing the next day. MISI must be accessed in **R(etrieval)** mode, the user must have an authority level of 1 or greater on MIPIP, and the case must have been scheduled for the "logged-in" unit. If these criteria are met, MISI displays a column after each selection number. The user enters an "X" in this data slot and executes the product by pressing **SEND**. This causes the designated MIPIPs to be created for printing the next day. However, if a Pre-Inspection Package already exists for that particular case a "P" will appear in the data slot and it will be locked to the user. This prevents the creation of a duplicate Pre-Inspection Package. Pre-Inspection Packages may be printed multiple times from PFSO.

A "**P**" is written to MISI when the MIPIP resides in PFSO and is ready to print. The user must kill the MIPIP on PFSO to remove the "**P**" so another MIPIP can be requested on MISI.

MISI may consist of more than one screen image. MISI displays up to fifty (50) log entries along with the message "KEY SEL,1,2,... FOR MISF(S)" or "KEY SEL,1,2... FOR MIAR(S)", depending on the access mode, in the Response Slot. The user selects the desired entries and presses **SEND**. If there are more entries, the Response Slot displays the message "SEND FOR SELECT(S) OR MORE". The user may make more selections, **SEND** a blank to bring up the first selection on the queue or enter **MORE** to see the next page of entries. If only one page of entries exists, the user may make more selections or press **SEND** twice to bring up the first selection on the queue.

Please Note: To see a more in-depth discussion of how SELECTION and the MORE command function together, please see Section 1.D in this guide.

- b. Special Processing. None.

C. Marine Inspection Status at Port -- MISIP.

1. MISIP Purpose and Description.

- a. Displays open inspection case summaries and case status attached to a given unit for vessels, platforms and factories.
- b. Allows selection of Marine Inspection Activity Reports for cases listed.
- c. Figure 5-2 shows MISIP as it appears on the terminal.

2. Accessing MISIP.

- a. Menu. MISIP is normally accessed through MIEI.
- b. Free-Form. MISIP can be accessed through free-form with a unit or port code as follows:

-MISIP,<E, U, or R>,UNIT=<unit or port code>

where:

E = entry mode

U = update mode

R = retrieval mode

UNIT = unit or port code

Please Note: The mode has no meaning when requesting MISIP.

EXAMPLE:

-MISIP,R,UNIT=PATMS

- c. Selection From Other Products. MISIP is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

Please Note: If a user with a password authority access level of 2 for MISIP uses the SELECTION command and had free-formed to MISIP, with either U(pdate) or E(ntry) mode, then U(pdate) mode will be carried to MIAR, provided the log in port code is equal to the initiating port code for that MIAR.

3. MISIP Data Entry Requirements and Explanation.

- a. General Processing. MISIP is entered through MIEI with a unit designation (default is user's unit). The user can specify FROM and TO dates to display

only the open cases that fall on and between specified dates. MISP serves as an index for these open cases. It displays up to fifty (50) log entries along with the message "KEY SEL,1,2... FOR MIAR(S)" in the Response Slot. The user selects the desired entries and presses **SEND**. If there are more entries, the Response Slot displays the message "SEND FOR SELECT(S) OR MORE". The user may make more selections, SEND a blank to bring up the first selection on the queue or enter **MORE** to see the next page of log entries. If only one page of entries exists, the user may make more selections or press **SEND** twice to bring up the first selection on the queue. If MISP is accessed in **R(etrieval)** mode, the selected MIARs will also be in **R(etrieval)** mode. However, if MISP is free-formed in **E(ntry)** or **U(pdate)** modes, the selected MIARs will be in **U(pdate)** mode.

Please Note: To see a more in-depth discussion of how **SELECTION**s and the **MORE** command function together, please see Section 1.D in this guide.

- b. Special Processing. None.

FIGURE 5-2. EXAMPLE OF MISP

D. Marine Inspection Port Log -- MIPL.

1. MIPL Purpose and Description.

- a. Displays closed inspection case summaries for vessels, platforms and factories attached to a given unit.
- b. Allows selection of Marine Inspection Activity Reports for cases listed.
- c. c. Figure 5-3 shows MIPL as it appears on the terminal.

2. Accessing MIPL.

- a. Menu. MIPL is normally accessed through MIEI.
- b. Free-Form. MIPL can be accessed through free-form with a unit or port code as follows:

-MIPL,<E, U, or R>,UNIT=<unit or port code>

where:

E = entry mode

U = update mode

R = retrieval mode

UNIT = unit or port code

Please Note: The mode has no meaning when requesting MIPL.

EXAMPLE:

-MIPL,R,UNIT=PATMS

- c. Selection From Other Products. MIPL is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. MIPL Data Entry Requirements and Explanation.

- a. General Processing. MIPL is entered through MIEI with a unit designation (default is user's unit). The user can specify FROM and TO dates to display only the closed cases that fall on and between the specified dates. MIPL serves as an index for these closed cases. It displays up to fifty (50) log entries along with the message "KEY SEL,1,2... FOR MIAR(S)" in the Response Slot. The user selects the desired entries and presses **SEND**. If there are more

entries, the Response Slot displays the message "SEND FOR SELECT(S) OR MORE". The user may make more selections, **SEND** a blank to bring up the first selection on the queue or enter **MORE** to see the next page of log entries. If only one page of entries exists, the user may make more selections or press **SEND** twice to bring up the first selection on the queue. **Please Note:** To see a more in-depth discussion of how SELECTIONs and the **MORE** command function together, please see Section 1.D in this guide.

- b. Special Processing. None.

E. Marine Inspection List for Fleet of Responsibility -- MIFR.

1. MIFR Purpose and Description.

- a. Displays vessels whose most recent inspection for certification was filed by the specified unit.
- b. Figure 5-4 shows MIFR as it appears on the terminal.

2. Accessing MIFR.

- a. Menu. MIFR is normally accessed through MIEI.
- b. Free-Form. MIFR can be accessed through free-form with:

-MIFR,<E, U, or R>,UNIT=<unit or port code>

where:

E = entry mode

U = update mode

R = retrieval mode

UNIT = unit or port code

EXAMPLE:

-MIFR,R,UNIT=PATMS

- c. Selection from Other Products. MIFR is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. MIFR Data Entry Requirements and Explanation.

- a. General Processing. MIFR is entered through MIEI with a unit designator (default is user's unit). MSIS responds with a list of vessels whose most recent inspection for certification was filed by the designated unit. The first screen image for MIFR displays the first fifty (50) entries along with the message "KEY MORE FOR NEXT PAGE" in the Response Slot. The user enters MORE in the Command Slot and presses SEND to view the next page of entries.
- b. Special Processing. None.

F. Marine Inspection List of Overdue Inspections -- MIOI.

1. MIOI Purpose and Description.

- a. Displays information about vessels and platforms attached to a given unit that have overdue inspections.
- b. Displays all overdue periodic inspections for a unit except for deactivated vessels and vessels for which the next due date on MISF is blank.
- c. Figure 5-5 shows MIOI as it appears on the terminal.

2. Accessing MIOI.

- a. Menu. MIOI is normally accessed through MIEI.
- b. Free-Form. MIOI can be accessed through free-form with a unit or port code as follows:

-MIOI,<E, U, or R>,UNIT=<unit or port code>

where:

E = entry mode

U = update mode

R = retrieval mode

UNIT = unit or port code

Please Note: The mode has no meaning when requesting MIOI.

EXAMPLE:

-MIOI,R,UNIT=PATMS

- c. Selection From Other Products. MIOI is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. MIOI Data Entry Requirements an Explanation.

- a. General Processing. MIOI is entered through MIEI with a unit designation (default is user's unit) and FROM-TO dates, if desired. A list of overdue inspections and some marine information, including Name, VIN or FIN, Due Date, the Type of Inspection and the Certificate Status, is presented for the designated

unit. The first screen image for MIOI displays the first fifty (50) log entries along with the message "KEY MORE FOR NEXT PAGE" in the Response Slot. The user enters **MORE** in the Command Slot and presses **SEND** to view the next page of entries.

CHAPTER 6. SUBCHAPTER Q EQUIPMENT

- A. General. This group consists of five products which provide current information on approved marine equipment to Coast Guard field personnel. Marine Inspection Approved Equipment (MIAE) is used to record data (such as approval holder, descriptions and remarks) about a particular piece of approved marine equipment. Marine Inspection Class Description (MICD) is used to enter general text for an equipment class which is then mapped to new MIAEs to provide a standard wording for that class. Both Marine Inspection Equipment Classes (MEC) and Marine Inspection Equipment List (MIEL) are logs that provide a way to locate class numbers and Subchapter Q Numbers, respectively. Finally, Marine Inspection Certificate of Approval (MICOA) allows the printing of the Certificate of Approval on official U.S. Coast Guard forms.

The Subchapter Q Equipment products use two identification numbers: the Subchapter Q number (QNUM) and the Subchapter Q Class number (QCLASS). The correct form of these numbers must be used to successfully access these products.

QNUM is a number that may be 12, 14, 15, or 17 characters long, depending on whether the number refers to a primary label or private label supplier. The following are acceptable formats for QNUM, with "x" being equal to a digit and "A" being the private label identifier:

xxx.xxx/xxxx	Primary label supplier
xxx.xxx/xxxx/xx	Primary label supplier with mod
xxx.xxx/Axxxx	Private label supplier
xxx.xxx/Axxxx/xx	Private label supplier with mod

For example, 161.033/B0223/02 and 161.045/0022 are both valid QNUMs. QNUMs must be one of the acceptable lengths and must contain the period and slashes in the correct locations. The QNUM must also contain any zeros that would normally appear in the number. It is common for a Subchapter Q number to be written, in longhand, by an MSIS user with less than the twelve (12) to seventeen (17) characters, if the second or third portion of the Subchapter Q number contains zeros left of the digits in each section. For example, if the complete Subchapter Q number is "161.045/0022", a user often writes the number as "161.45/22". These "shorthand" QNUMs can not be used with MSIS.

QCLASS is the first seven (7) characters of a Subchapter Q number, including six (6) digits and a period. For example, 161.043 is a valid QCLASS. Like the QNUM, QCLASS must contain the correct number of digits, a period and any zeros that would normally appear in the number.

- B. Marine Inspection Approved Equipment -- MIAE.

1. MIAE Purpose and Description.

- a. Allows the recording of data concerning a particular piece of approved marine equipment.
- b. Generates an expiration notice to the originating port 30 days prior to expiration via the Port File Morning Report (PFMR).
- c. Generates new private label MIAEs from the primary label MIAE.
- d. Provides base information for the Marine Inspection Equipment List (MIEL) and the Party Name Equipment Association (PNEA).
- e. e. Maps data to the Certificate of Approval - MICOA.
- f. Figure 6-1 shows the data definitions for MIAE. See Table 6-1 for the code values and Enclosure (1) for the abbreviation meanings.
- g. The use of this product is illustrated in the following example sequence entitled: Entering Approved Equipment Data.

2. Accessing MIAE.

- a. Menu. MIAE is normally accessed through MIEL.
- b. Free-From. MIAE can be accessed through free-fom with a Subchapter Q Number as follows:

-MIAE,<E, U, or R>,QNUM=<subchapter Q number>

where:

E = entry mode

U = update mode

R = retrieval mode

QNUM = subchapter Q number; must be the correct length with the period and, slashes in the correct locations. QNUM must include any zeros that would normally appear in the Subchapter Q number.

EXAMPLE:

-MIAE,U,QNUM=161.218/0022

- c. Selection From Other Products. MIAE may be accessed from MIEL.

d. Product Use Authority Levels.

Retrieval - 1 Entry/Update - 2

3. MIAE Data Entry Requirements and Explanation.

- a. General Processing. MIAE is accessed in E(ntry) mode through MIEI using a QNUM. MSIS responds with the MIAE screen image displaying the data entered in MICD, Marine Inspection Class Description, for that particular class. (If an MICD does not exist, the user receives the message "QCLASS MUST BE FILED FIRST".) The user may then accept or revise these default paragraphs as necessary. The user may also enter private label IPNs on MIAE. Once the MIAE is sent, an individual MIAE with the primary MIAE data as the default is generated for each of the IPNs entered as private label suppliers. MSIS automatically fills the Current Status slot with "PENDING" when these MIAEs are generated. The user may change this to "APPROVED" when the suppliers have been granted approval.

In **U(pdate)** mode, MSIS provides three additional lines for private label suppliers and allows the user to change or delete the primary and private label supplier information. Private label supplier information must be updated or deleted on the private label MIAE screen. The primary supplier information must be changed on the primary's MIAE screen, and a primary supplier can not be deleted if any private label suppliers are still linked to that primary supplier. To delete an MIAE, place an "**X**" in the DELETE QNUM slot and press **SEND**. Changes to any supplier's name or address must be made using PNID.

MIAE generates an expiration notice on the Port File Morning Report(PFMR) to the originating unit thirty (30) days prior to the expiration of approval for either a primary or private label supplier. If no action is taken by the originating unit to update the expiration date, the Current Status slot is set to "EXPIRED" and "EXPIRED" is also mapped to any private label suppliers linked to that private supplier. A second morning report notice is generated to the originating unit stating that approval for the Subchapter Q number is expired. MSIS also moves the primary supplier and any associated private suppliers to the history sections of Marine Inspection Equipment List (MIEL) and Party Name Equipment Association (PNEA).

Please Note: The approval status for a private supplier can equal but not exceed the status of the primary supplier at any time. The priority of approval status, highest to lowest, is: APPROVED, PENDING, EXPIRED, FORMER-MAY USE and FORMER-DO NOT USE. Also, the approval effective date on any MIAE must be older than the expiration date. Additionally, the expiration date for the private label supplier can not exceed the primary supplier's expiration date; that is, the private supplier can not expire after the primary supplier.

- b. Special Processing. None.

COMMAND / _____ RESPONSE/MIEI NEXT ON QUEUE 03JUN87
MIAE MARINE INSPECTION APPROVED EQUIPMENT
PROD COMPLETED SUCCESSFULLY

C. Marine Inspection Class Description -- MICD.

1. MICD Purpose and Description.

- a. Allows the entry of general text data for a class of Subchapter Q equipment.
- b. Maps the general text to each newly-created MIAE, providing standard wording for that particular class of approved equipment.
- c. Figure 6-2 shows the data definitions for MICD. See Enclosure (1) for the abbreviation meanings.
- d. The use of MICD is illustrated in the following example sequence entitled: Entering a Class Description.

2. Accessing MICD.

- a. Menu. MICD is normally accessed through MIEI.
- b. Free-Form. MICD can be accessed through free-form with a Subchapter Q class number as follows:

-MICD,<E, U, or R>,QCLASS=<subchapter Q class number>

where:

E = entry mode

U = update mode

R = retrieval mode

QCLASS = subchapter Q class number: the first six digits of a Subchapter Q number. It must include the period and any zeros that would normally appear in the number.

EXAMPLE:

-MICD,U,QCLASS=161.122

- c. Selection From Other Products. MICD is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval – 1

Entry/Update - 2

3. MICD Data Entry Requirements and Explanation.

- a. General Processing. In **E(ntry)** mode, MICD is accessed through MIEI using a QCLASS number. MICD responds with a form containing heading information and five blank narrative paragraphs. The user enters

general text in these paragraphs to provide standard wording for this particular class of approved equipment. Once this text has been sent it will be displayed both on MICD and on any subsequently generated MIAEs. Only personnel with designated G-MVI-3 passwords can enter this information on MICD.

In **U(pdate)** mode, any of the text paragraphs may be changed or have text added to them. An MICD may be deleted only when all MIAEs linked to a particular class have been removed from MSIS. An MICD is deleted by placing an "**X**" in the Delete Class slot and pressing **SEND**.

MICD may be accessed in **R(etrieval)** mode to view the descriptive information currently available for a particular class of Subchapter Q approved equipment.

- b. Special Processing. None.

STEP 8

- MSIS responds with a confirmation message

COMMAND / _____ RESPONSE/MIEI NEXT ON QUEUE
MIAE MARINE INSPECTION APPROVED EQUIPMENT 16SEP86

PROD COMPLETED SUCCESSFULLY

D. Marine Inspection Equipment Classes -- MIEC.

1. MIEC Purpose and Description.

- a. Permits the user to locate a Subchapter Q class number given a particular class description.
- b. Provides a current list of established Subchapter Q classes.
- c. May be used to select a list (MIEL) of all current and formerly approved Subchapter Q numbers associated with a class.
- d. Receives an entry when a Marine Inspection Class Description (MICD) is completed.
- e. Figure 6-3 shows MIEC as it appears on the terminal.
- f. The use of this product is illustrated in the following example sequence entitled: Retrieval of a Subchapter Q Number.

2. Accessing MIEC.

- a. Menu. MIEC is normally accessed through MIEI.
- b. Free-Form. MIEC can be accessed through free-form with just the product code as follows:

-MIEC,<E, U, or R>

where:

E = entry mode

U = update mode

R = retrieval mode

EXAMPLE:

-MIEC,R

- c. Selection From Other Products. MIEC is not accessed from other products; however, MIEC "pushes" itself back on the queue following selections made by the user. After all selections are completed, MIEC will be next on queue. To remove MIEC from the queue, enter SKIP in the Command Slot and press **SEND**.
- d. Product Use Authority Levels.

Retrieval - 1

3. **MIEC Data Entry Requirements and Explanation.**

- a. **General Processing.** MIEC is retrieved through MIEI, with no required identifiers. MSIS responds with a list of Subchapter Q classes, each entry containing a SEL KEY, a Q Class Number and a Class Description. The user may select one or more entries from the list and then proceed to MIEL (Marine Inspection Equipment List) for a list of current MIAEs associated with the desired class(es). MIEC may be accessed in any mode; however, if a user with an MIEC password authority of 2 or higher free-forms to MIEC in either **E(ntry)** or **U(pdate)** mode, **U(pdate)** mode is carried over to any selected MIELs and MIAEs, provided the login port code is the same as the initiating port code for that MIAE.
- b. **Special Processing.** None.

E. Marine Inspection Equipment List -- MIEL.

1. MIEL Purpose and Description.

- a. Allows the user to locate current and formerly approved Subchapter Q Numbers given a particular class number.
- b. Provides a listing of currently established Subchapter Q Numbers associated with a particular class.
- c. Permits the selection of an MIAE for a particular piece of Subchapter Q approved equipment.
- d. Figure 6-4 shows MIEL as it appears on the terminal.
- e. The use of this product is illustrated in the following example sequence: Selecting an MIAE from MIEL.

2. Accessing MIEL.

- a. Menu. MIEL is normally accessed through MIEL.
- b. Free-Form. MIEL can be accessed through free-form with a Subchapter Q class number as follows:

-MIEL,<E, U, or R>,QCLASS=<subchapter Q class number>

where:

E = entry mode

U = update mode

R = retrieval mode

QCLASS = subchapter Q class number: the first six digits of a Subchapter Q number. It must include the period and any zeros that would normally appear in the number.

EXAMPLE:

-MIEL,U,QCLASS=161.233

- c. Selection From Other Products. MIEL is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. **MIEL Data Entry Requirements and Explanation.**

- a. **General Processing.** MIEL is accessed through MIEI with a QCLASS number. MSIS responds with list of all "members" of a QCLASS, including the Sel Key, Q Number, IPN, Name, Effect Date, and Status. MIEL displays up to fifty (50) entries along with the message "KEY SEL,1,2,... FOR MIAE(S)" in the Response Slot. The user selects the desired log entries and presses SEND. If there are more entries, the Response Slot displays the message "SEND FOR SELECT(S) OR MORE". The user may make more selections, **SEND** a blank to bring up the first selection on the queue or enter **MORE** to see the next page of entries. If only one page of entries exists, the user may make more selections or press SEND twice to bring up the first selection on the queue.

MIEL also contains a list of former sources, if such sources exist. After displaying all current sources and/or all selections chosen by the user, MIEL displays the message "KEY HISTORY TO VIEW HISTORY". The user enters "**HISTORY**" to see a list of former sources. If there are more than fifty (50) entries, the user may enter MORE as explained above.

MIEL may be accessed in any mode; however, if a user with an MIEL password authority of 2 or higher free-forms to MIEL in either **E(ntry)** or **U(Ddate)** mode, **U(pdate)** mode is carried over to any selected MIAEs, provided the login port code is the same as the initiating port code for that MIAE.

- b. **Special Processing.** None.

F. Marine Inspection Certificate Of Approval -- **MICOA**.

1. **MICOA** Purpose and Description.

- a. Permits the printing of Certificate of Approval information onto an official U.S. Coast Guard form.
- b. Generates the COA from data previously entered on MIAE and PNID.
- c. Figure 6-5 shows MICOA as it appears on the terminal.
- d. The use of this product is illustrated in the following sequence entitled: Printing the Certificate of Approval.

2. Accessing **MICOA**.

- a. Menu. MICOA is normally accessed through MIEI.
- b. Free-Form. MICOA can be accessed through free-form with a Subchapter Q number as follows:

-MICOA,<E, U, or R>,QNUM=<subchapter Q number>

where:

E = entry mode

U = update mode

R = retrieval mode

QNUM = subchapter Q number: must be the correct length with the period and slashes in the correct location. QNUM must include any zeros that would normally appear in the Subchapter Q number.

EXAMPLE:

-MICOA,R,QNUM=161.322/A0011

- c. Selection From Other Products. MICOA is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. **MICOA** Data Entry Requirements and Explanation.

- a. General Processing. MICOA is accessed through MIEI using a Subchapter Q number. MICOA responds with the statement "Certificate of Approval Forms Should be Placed in the Printer" and the instructions to press

SEND to print the certificate or press ABORT to stop the request. The user then places the correct forms in the printer and prints the certificate or aborts out of MICOA.

NOTE: Once a complete QNUM has been entered in MSIS, the user may switch to other Subchapter Q numbers within the same class by entering only the last portion of the QNUM. For example, if the complete QNUM is 161.043/A/0022 and the number 161.043 has already been entered, the user may enter the following:

-MICOA,R,QNUM=A/0022

- b. Special Processing. None.

PROD COMPLETED SUCCESSFULLY

CHAPTER 7. INSPECTION OUTPUTS

- A. General. This chapter includes those Marine Inspection products which produce printed outputs. Three MI products are associated with the Certificate of Inspection, namely, the Marine Inspection Certificate of Inspection Proxy Form (MICOI), Marine Inspection Certificate of Inspection Form (MICIF) and the Marine Inspection Certificate Amendments (MICA). The Marine Inspection Pre-Inspection Package (MIPIP) represents a composite of all MSIS information relevant to the conduct of an inspection of a specific vessel. Finally, there are seven products which generate letters to a vessel's operator for various purposes. These are discussed in Section F - Marine Inspection Letters.

- B. Marine Inspection Certificate Inspection Proxy Form -- MICOI.

1. **MICOI Purpose and Description.**

- a. Generates COI to the screen so it can be printed for review.
- b. Calls an additional product, MICIA, automatically for viewing all the attachments to the COI.
- c. Figure 7-1 shows MICOI and its attachments as they appear on the terminal.
- d. The use of MICOI is illustrated in the following example sequence entitled: Retrieving the Certificate of Inspection Proxy Image.

2. **Accessing MICOI.**

- a. Menu. MICOI is normally accessed through VFLI.
- b. Free-Form. MICOI can be accessed through free-form with:

-MICOI,R,VIN=<vessel identification number>

where:

R = retrieval mode

VIN = vessel identification number

EXAMPLE:

-MICOI,R,VIN=CG00003

- c. Selection From Other Products. MICOI is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. **MICOI Data Entry Requirements and Explanation.**

- a. General Processing. MICOI is used in **R(etrieval)** mode only, using the vessel's VIN. MICOI responds with a proxy of the Certificate of Inspection issued or to be issued to the subject vessel. The MICOI proxy is in a format which resembles the first page of the official COI document. MICOI automatically invokes the MICIA product (Marine Inspection COI Attachment) to display the attachments for the COI copy. The user only needs to press **SEND** to view these attachments.

A user may stop the printing of the COI at any time (Cont'd) by pressing **SHIFT ABORT**. To exit MICOI, press **SHIFT ABORT** a second time.

A name change has the following effect on the COI: The new vessel name becomes the VESSEL NAME shown on the COI. The vessel's old name becomes EX NAME on the COI and will show as EX NAME on the COI during the issue and first reissue of the COI.

The second reissue of a COI will not display an EX NAME for the vessel.

If the vessel has the vessel use of "FERRY BOAT", then the TOTAL PERSONS slot and PASSENGERS slot will contain the word "FERRY".

- b. Special Processing. None.

C. Marine Inspection Certificate of Inspection Form -- MICIF.

1. MICIF Purpose and Description.

- a. Prints all vessel data required on a Certificate of Inspection on a pre-printed, continuously fed COI form; CG-841.
- b. Signature authority printed on COI is always the login unit.
- c. Invokes MICAF to print the attachment for the COI.
- d. Figure 7-2 shows MICIF as it appears on the printer.
- e. The use of MICIF is illustrated in the following example sequence entitled: Printing the Certificate of Inspection.

2. Accessing MICIF.

- a. Menu. MICIF is normally accessed through VFLI.
- b. Free-Form. MICIF can be accessed through free-form with:

-MICIF,R,VIN=<vessel identification number>

(Signature authority printed on the COI will be the MSIS log-in unit and not the POC for the vessel.)

where:

R = retrieval mode

VIN = vessel identification number

EXAMPLE:

-MICIF,R,VIN=CG000008

- c. Selection From Other Products. MICIF is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval - 1

3. MICIF Data Entry Requirements and Explanation.

- a. General Processing. MICIF is normally entered through VFLI with a VIN or CALL number. MSIS responds with a screen which reminds the user to place the forms into the printer and gives the user a chance to print the form or ABORT.

Please Note: If a Permit to Proceed document exists on VFLD, the warning message "Warning Permit to Proceed Exists" appears before the COI will print.

For MICIF to execute, the following had to have been entered for the vessel:

- (1) VFIP, VFOD, VFPS, and VFLD (updated by filing an MIAR)
- (2) Inspection for certification filed
- (3) Vessel linked to an owner and an operator
- (4) Port of documentation known to MSIS for documented vessels
- (5) Port of certification known to MSIS.

The user may stop the printing of the COI at anytime by pressing **SHIFT ABORT**. To exit MICIF, press **SHIFT ABORT** a second time.

A name change has the following effect on the COI: The new vessel name becomes the VESSEL NAME shown on the COI. The vessel's old name becomes EX NAME on the COI and will show as EX NAME on the COI during the issue and first reissue of the COI.

The second reissue of a COI will not display an EX NAME for the vessel.

If the vessel has the vessel use of "FERRY BOAT", then the TOTAL PERSONS slot and PASSENGERS slot will contain the word "FERRY".

- b. Special Procesing. None.

However, it is "legible" to the
printer.)

D. Marine Inspection Certificate Amendments -- MICA.

1. MICA Purpose and Description.

- a. Enters a description of any amendments to a vessel's COI for documentation purposes only.
- b. Allows entry and retrieval of the unit, date, and a description of changes to the information on a vessel's COI.
- c. Sends a morning report message to the vessel's port of certification.
- d. Maps data to the vessel's critical profile (Marine Inspection Critical Profile).
- e. Upon validation of a subsequent inspection for certification case, the MICAs expire, but remain in the MSIS data base.
- f. Figure 7-4 shows the data definitions for MICA. See Table 7-1 for the code values and Enclosure (1) for the abbreviation meanings.
- g. The use of MICA is illustrated in the following example sequence entitled: Amending the Certificate of Inspection.

2. Accessing MICA.

- a. Menu. MICA is normally accessed through MIEI.
- b. Free-Form. MICA can be accessed through free-form with a case number as follows:

-MICA,<E, U, or R>,CASE=<inspection case number>

where:

E = entry mode

U = update mode

R = retrieval mode

CASE = inspection case number

EXAMPLE:

-MICA,E,CASE=MI84000048

- c. Selection From Other Products. MICA may be accessed from MIAR.
- d. Product Use Authority Levels.

Retrieval – 1

Entry/Update - 2

3. MICA Data Entry Requirements and Explanation.

- a. General Processing. The user may either select MICA from MIAR or enter an Inspection Case Number on MIEI to access MICA in E(ntry) mode. MSIS maps the Port, Date Amended and Case Number from MIAR and provides the number of blank forms requested on MIAR. If the number is not specified on MIAR, MSIS automatically provides one blank form, as long as the associated MIAR has not been validated. The user then fills in the blank form(s) with the desired amendment information.

An MICA may not be filed if there is an open MIAR case for certification. This prevents a port from filing an amendment to an existing COI while another port is in the process of issuing a new COI. MSIS checks for an open certification case by determining the status on VFLD.

In **U(pdate)** mode, MICA allows the user to change any amendments entered by the user's unit. MSIS displays all existing COI amendments and one blank form for additional amendments, up to a maximum of fifteen forms. To delete any amendments entered by the user's unit, the user simply blanks out all unlocked data slots.

MICA in **R(etrieval)** mode displays all amendments for the specified vessel.

When MICA is executed in **E(ntry)** or **U(pdate)** mode, the Port of Certification of Inspection is automatically notified through a morning report message. Also, when an updated Certificate of Inspection is generated all valid certificate amendments are appended to it. When the next inspection for certification is performed, all current amendments expire but are kept in the MSIS data base by Case Number. Expired amendments are not listed on the vessel's MICP. The user may retrieve any amendments attached to a particular case through MICA; however, the user should use MICP to retrieve all amendments that are current and attached to a particular vessel.

Please note: Certificate amendments may be locked for two reasons. These are:

- (1) The controlling MIAR has been validated, thus locking the MICA to further updates or additions.
 - (2) An amendment has been filed with a date that is earlier than the COI issue date. Even if the MI case remains open, the MICA can not be updated.
- b. Special Processing. None.

E. Marine Inspection Pre-Inspection Package -- **MIPIP**.

1. **MIPIP** Purpose and Description.

- a. Represents a composite of all vessel-related MSIS information relevant to the inspection of a particular vessel.
- b. It includes all outstanding or otherwise critical items from previous Coast Guard contacts, a list of all required safety documents with their expiration dates, and a complete description of the physical systems and equipment on a vessel.
- c. Figure 7-5 shows MIPIP as it appears on the terminal.
- d. The use of MIPIP is illustrated in the following example sequence entitled: Printing the Pre-Inspection Package.

2. Accessing. **MIPIP**.

- a. Menu. MIPIP is normally accessed through MIEI.

- b. Free-Form. MIPIP can be accessed through free-form with:

-MIPIP,<E, U, or R>,VIN=<vessel identification number>

where:

E = entry mode

U = update mode

R = retrieval mode

VIN = vessel identification number

EXAMPLE:

-MIPIP,R,VIN=CG000156

- c. Selection From Other Products. MIPIP may be accessed from MISI.

- d. Product Use Authority Levels.

Access from MISI - 1

Access from MIEI or by free-forming - 3

3. **MIPIP** Data Entry Requirements an Explantion.

- a. General Processing. MIPIP is normally accessed through MISI. Requesting the MIPIP through MISI causes the pre-inspection package to be "tickled"

(run in batch mode) overnight for printing the following day through PFSO. The pre-inspection package is selected and printed from PFSO in the same way as Marine Inspection letters.

The pre-inspection package consists of the following data in the following sequence:

IDENTIFICATION DATA:

The case, port, and date the PIP was generated.

B. Vessel Identifiers (VFID)

INSPECTION STATUS:

C. Inspection Status Summary (MISS)

D. Scheduled Inspection (MISF)

E. Safety/Regulatory Documents (VFLD)

F. Involved Party Identifiers (VFIP)

G. Inspection Status Details (MISD)

H. Inspection Critical Profile (MICP)

I. Damage and Defects Log (VFDL)

J. Open Cases Attached to the Vessel (VFOC)

K. Coast Guard Contact Log (VFCE)

PARTICULAR DETAILS:

L. Particular Summary (VFPS)

M. Construction Details (VFCD)

N. Design Details (VFDD)

O. Measurement Details (VFMD)

P. Operating Details (VFOD)

Q. Stability/Loadline Details (VFSL)

R. Cargo Authority (VFCA)

S. Specific Dangerous Cargo Authority (VFCL)

T. Conditions of Carriage (VFCC)

SYSTEM DETAILS:

U. System Summary (VFSS)

V. Boiler Details (VFBD)

W. Examined Pressure Vessels (VFPV)

X. Cargo Specifications (VFCS)

Y. Hull Details (VFHD)

Z. Propulsion Details (VFPD)

AA. Steering Details (VFSD)

BB. Navigation Details (VFND)

CC. Electrical Details (VFED)

DD. Pump Details (VFPD)

EE. Deck Machinery (VFDM)

FF. Lifesaving Details (VFSL)

GG. Portable Fire Fighting Details (VFPF)

HH. Fixed Fire Fighting Details (VFFF)

II. Miscellaneous Systems (VFMS)

FOREIGN VESSELS:

HH. Subchapter O Endorsement (VFSE)

Any MIPIP processed in batch mode and successfully generated is deleted automatically five (5) calendar days after generation, if not killed by the user during the processing of PFSO. MSIS does not generate a morning report to warn of these deletions.

- b. Special Processing. If a problem develops with the printer (out of paper or jammed) during the direct printing of an MIPIP, the user presses ABORT to halt its processing. MSIS continues to download data until it reaches the end of a page. Printing may be resumed by pressing SHIFT PRINT to print the page stored in the C3's memory and then pressing SEND to signal MSIS to continue processing of the MIPIP. If the user wishes to end the processing altogether, he/she may press ABORT. The printing of the MIPIP is done in host print mode.

Please Note: When MIPIP is accessed through MISI and processed in batch mode, an authority level of 1 is required. When it is accessed through MIEI or free-formed, and therefore generated on-line, an access level of 3 is required.

```

F. Marine Inspection Letters. The Marine Inspection product set contains seven products which generate letters to a vessel's operator for various purposes. These letters inform the operator of a needed inspection, an expired COI, the extension of compliance dates for outstanding requirements and non-compliance with such requirements. These seven Marine Inspection products are:

- Marine Inspection Letter of Notification (MILON)
- Marine Inspection Letter of Expiration of Certification (MILEC)
- Marine Inspection Letter of Extension of Requirements (MINER)
- Marine Inspection Letter of Issuance of Requirements (MILIR)
- Marine Inspection Initial Letter of Non-Compliance (MIILN)
- Marine Inspection Final Letter of Non-Compliance (MIFLN)
- Marine Inspection Reinspection Notification Letter (MIRNL).

The seven letters are generated by MSIS based on "tickler" dates established by other Vessel File and Marine Inspection products as well as by the letters themselves. Figure 7-7 shows how these letters are sequenced and which products or letters trigger a succeeding letter. For example, MILON is tickled by a validated MIAR which sets the date for the next certificate inspection. Taken as a whole, the seven letters are sequenced by the inspection (and citation of outstanding requirements) process characterized by the MSIS products MIAR, MIDR, and MIDF. The seven Marine Inspection letters will each be discussed in more detail below.

1. Marine Inspection Letters Purpose and Description.

- a. **MILON** - MILON is used to generate a letter to a vessel's operator 60 days before the due date of the vessel's inspection for Certification.
- b. **MILEC** - MILEC is used to generate a letter to the vessel's operator, on the vessel's COI expiration date, indicating that the vessel's COI has expired.

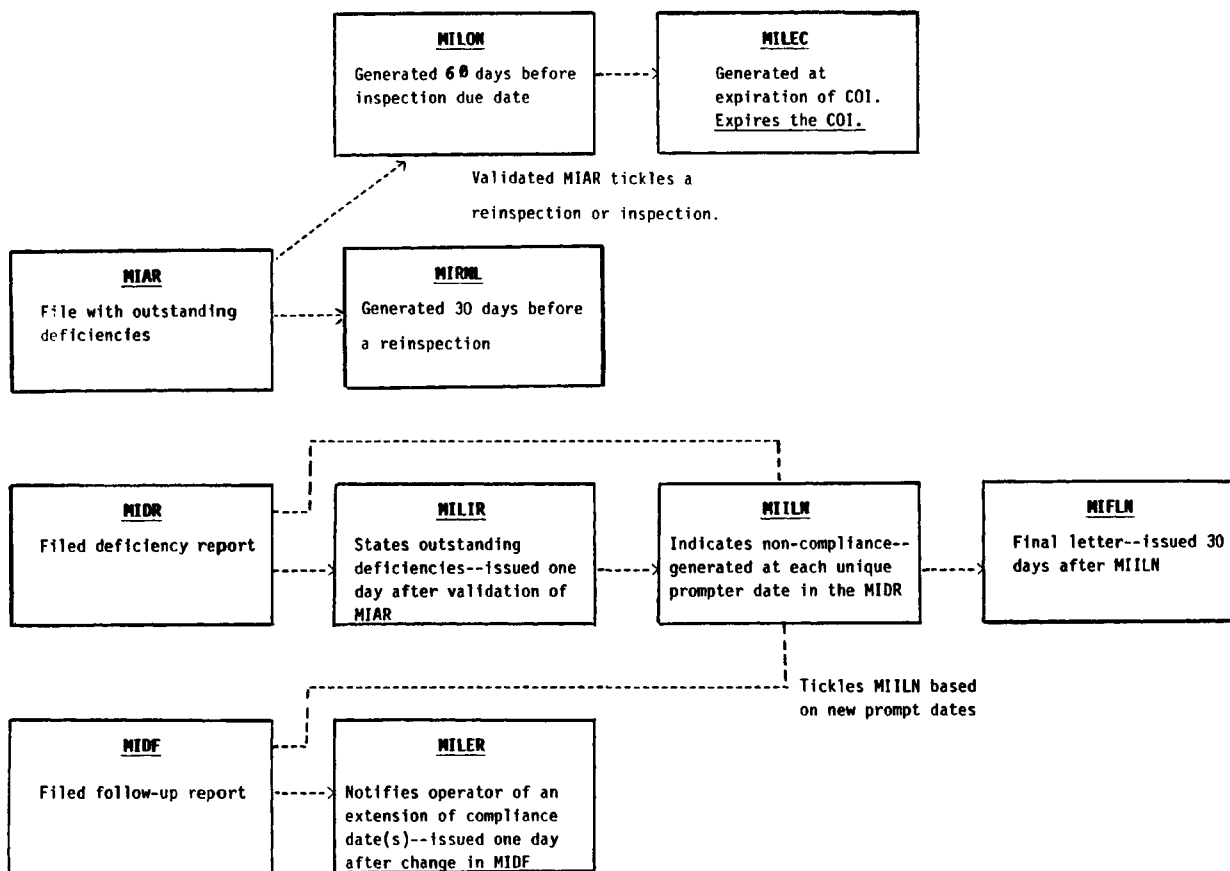

FIGURE 7-7. GENERATION SEQUENCE OF MARINE INSPECTION LETTERS

- c. **MILER** - MILER generates a letter to a vessel's operator listing the old and new compliance dates for all outstanding requirements which have had their compliance dates extended.
 - d. **MILIR** - MILIR writes a letter to a vessel's operator informing him/her that requirements remain outstanding against the referenced vessel as a result of the subject inspection case.
 - e. **MIILN** - MIILN generates a letter to a vessel's operator indicating non-compliance with outstanding requirements issued against the referenced vessel.
 - f. **MIFLN** - MIFLN is used to generate the final letter to the operator of a referenced vessel indicating non-compliance with outstanding requirements.
 - g. **MIRNL** - MIRNL issues a letter to a vessel's operator 30 days before a reinspection. It also includes any outstanding or impending hull exams.
 - h. Signature authority for all letters is set on PFID.
 - i. In some instances, letters may be regenerated by MSIS. Contact GMVI for assistance.
 - j. Figures 7-8 through 7-14 show examples of the seven Marine Inspection letters.
2. Retrieving Marine Inspection Letters.
- a. **MILON.**
 - (1) Menu. None.
 - (2) Free-Form. None.
 - (3) Selection from Other Products. MILON may be retrieved through PFSO.
 - b. **MILEC.**
 - (1) (1) Menu. None.
 - (2) Free-Form. None.
 - (3) Selection from Other Products. MILEC may be retrieved through PFSO.
 - c. **MILER.**

- (1) Menu. None.
- (2) Free-Form. See Special Processing.
- (3) Selection from Other Products. MILER may be retrieved through PFSO.
- d. **MILIR.**
 - (1) Menu. None.
 - (2) Free-Form. See Special Processing.
 - (3) Selection from Other Products. MILIR may be retrieved through PFSO.
- e. **MILN.**
 - (1) Menu. None.
 - (2) Free-Form. None.
 - (3) Selection from Other Products. MILN may be retrieved through PFSO.
- f. **MIFLN.**
 - (1) Menu. None.
 - (2) Free-Form. None.
 - (3) Selection from Other Products. MIFLN may be retrieved through PFSO.
- g. **MIRNL.**
 - (1) Menu. None.
 - (2) Free-Form. None.
 - (3) Selection from Other Products. MIRNL may be retrieved through PFSO.
- h. Product Use Authority Levels
Not Applicable.
- 3. Marine Inspection Letters Data Entry Requirements and Explanation.
 - a. **MILON.** MILON generates the Letter of Notification to a vessel's operator informing him/her that an inspection for Certification is due within 60 days.

If the operator is unknown to MSIS, MILON makes an entry into the POC's morning report.

MILON is tickled by a validated MIAR which sets the date for the next certificate inspection. This prompt causes MILON to be listed on PFSO as a letter scheduled for output. The letter may then be printed and deleted from PFSO.

MILON updates the vessel's MISS with the statement "SENT MILON" and the date. It also tickles the MILEC letter for execution on the COI expiration date, if the inspection type is certification.

- b. **MILEC.** MILEC generates a letter to the operator of the subject vessel notifying him/her that the vessel's Certificate of Inspection has expired. MILEC is generated at the expiration date of the COI.

MILEC is prompted (tickled) on the expiration date of the COI by MILON at the time a MILON is sent for a certificate of inspection. This prompt causes MILEC to be listed on PFSO as a letter scheduled for output. The letter may then be printed and deleted from PFSO.

MILEC updates the vessel's MISS with the statement "**SENT MILEC**" and the date. It also updates the VFLD COI document record status of the vessel with the word "**EXPIRED**".

- c. **MILER.** MILER writes a letter to the vessel operator confirming his/her request to extend the compliance date(s) of the requirement(s) issued during the subject inspection. The reference case must have had the prompt date(s) changed, via MIDF, for one or more of its outstanding requirements before MILER can be generated.

MILER is prompted one day later by the aforementioned prompt date changes on MIDF. This prompt causes MILER to be listed on PFSO as a letter scheduled for output. The letter may then be printed and deleted from PFSO.

MILER updates each requirement definition (on MIDR) listed by the letter with the word "MILER" to prevent the same requirement from being listed again by a different execution of MILER.

- d. **MILIR**. MILIR generates a letter to the vessel operator informing him/her of the issuance of outstanding requirements as a result of the subject inspection case. The MILIR is issued one day after the validation of the MIAR containing the outstanding requirements.

MILIR is prompted (tickled) by outstanding requirements listed on the vessel's MIDR. This prompt causes MILIR to be listed on PFSO as a letter scheduled for output. The letter may then be printed and deleted from PFSO. Please note that the MILIR letter is terminated if all requirements have been updated since MILIR was ticked by the validation of the MIAR. MILIR updates each requirement definition (on MIDR) listed by the letter with the word "**MILIR**".

- e. **MIILN**. MIILN generates a letter to the vessel operator informing him/her of non-compliance with outstanding requirements initiated by the subject inspection case. The MIILN is sent only when one or more outstanding requirements exist that have a prompt date as old or older than the current date and that have not been listed by a previous MIILN letter.

MIILN is prompted (tickled) by the validation of the MIAR to execute on each unique prompt date found in the list of outstanding requirements. If the prompt date is not set by the user, a default of 5 days after the compliance date is used.

MIDF also tickles separate follow-up MIILN letters for each unique change in prompt dates found in the list of outstanding requirements. **MIILN** executes on each of the new prompt dates. Both of these prompts causes MIILN to be listed on PFSO as a letter scheduled for output. The letter may then be printed and deleted from PFSO.

MIILN updates each requirement definition (on MIDR) listed by the letter with the word "MIILN" and with the new MIFLN prompt date (requirement prompt date plus 30 days). MIILN also tickles a follow-up MIFLN letter to execute 30 days hence.

- f. **MIFLN**. MIFLN writes the final letter to the vessel operator informing him/her of non-compliance with outstanding requirements issued against the referenced vessel. MIFLN is prompted (tickled) by MIILN 30 days after MIILN is executed.

MIFLN is listed on PFSO as a letter scheduled for output. The letter may then be printed and deleted from PFSO. MIFLN updates each requirement definition (on MIDR) listed by the letter with the word "**MIFLN**."

- g. **MIRNL**. MIRNL generates a letter to the vessel operator notifying him/her that a reinspection is due. This letter also lists any outstanding or impending (within 30 days) hull exams. The MIRNL is issued 30 days prior to the reinspection and is prompted (tickled) by the validation of the MIAR. The MIRNL is listed on PFSO as a letter scheduled for output; it may be printed and deleted from PFSO.

Note: Whether viewed on the screen or printed, all MI letters display the message, Cannot Generate <letter> for VIN-----, when a letter can not be composed due to missing information. This message alerts the user that a particular letter can not be viewed or printed, though all other queued up letters can be printed or displayed without mishap.

- h. **Special Processing**. Normally, MSIS executes the function to "write" letters in the evening in background mode. It is possible to "write" a letter in advance of the normal system process. To do this: (1) the conditions which would normally generate a letter must be met, e.g., there must be a case with outstanding requirements and a letter for that case must not already exist; (2) execute the MIAR for the case in any mode to identify the case to MSIS; (3) enter the free-form command **-MILIR,E** or **-MILER,E** in the command line and press SEND. MSIS will then prompt when the process is complete and the letter will be available at PFSO. The same process can be used to regenerate a letter (with a new date or signature authority) if desired. It is important that the initial letter must be deleted from PFSO to successfully regenerate a new letter.

Subject: COWABUNGA

O.N. CG000184

Our records show the above vessel's Certificate of Inspection (COI) will expire on 12MAR88.

The Maritime Safety Act of 1984 (46USC 3309) requires you to notify the Coast Guard in writing, 30-60 days prior to expiration of a vessel's COI, if that vessel will or will not require an inspection. If you have not already made arrangements for this inspection, please send the notice to the OCMI that will conduct the inspection, if known. Otherwise, send it to this office.

The form below may be detached and sent as the required notice. Enclosed is an application for inspection (FORM CG3752) which may be used instead, if submitted within the required time frame. You should confirm the inspection date and location by telephone 15-30 days prior to the desired inspection date.

This letter does not relieve you of responsibility under the law to provide the required notice. Failure to provide notice may subject you to a civil penalty of \$1000.

G CHERETIS

Inspection Case: MI87000128 Conducted: 19DEC87
Vessel: HOLLYWOOD CHEM JIM

Our records indicate that the requirements on the attached list, which were issued at the inspection noted above, have not been satisfied. If these requirements have been attended to and cleared by a Coast Guard Marine Inspector please notify us so our records can be updated. If requirements remain outstanding, please convey:

1. The status of each requirement listed:
2. Your intentions with regard to any items which have not been satisfied:
3. The date and place the vessel will be available for a follow-up inspection.

Failure to satisfy these requirements may result in revocation of the vessel's Certificate of Inspection.

CHAPTER 8. ADMINISTRATION

- A. General. There are three products which aid in the general administration of Marine Inspection activities. The first product, Marine Inspection Field Information (MIFI), provides a means for GMVI to supply inspection information to the field offices. The other two products, Port File Activity Summary (PFAS) and Port File Marine Inspection Activity Summary (PFMI), are discussed in the Port File Transaction Guide, COMDTINST M5230.21A.

1. **MIFI Purpose and Description.**

- a. Provides a means for Headquarters (GMVI) to supply inspection information to the field offices.
- b. Figure 8-1 shows the data definitions for MIFI. See Enclosure (1) for the abbreviation meanings.

2. **Accessing MIFI.**

- a. **Menu.** MIFI is normally accessed through MIEI by Headquarters and field staff.
- b. **Free-Form.** MIFI can be accessed through free-form with:

-MIFI,<E, U, or R>

where:

E = entry mode

U = update mode

R = retrieval mode

EXAMPLE:

-MIFI,R

Note: MIFI can be free-formed in **E(ntry)** and **U(pdate)** modes by GMVI staff only. Both Headquarters and field staff can free-form MIFI in **R(etrieval)** mode.

- c. **Selection From Other Products.** MIFI is not accessed from other products.
- d. **Product Use Authority Levels.**

Retrieval - 1 Entry/Update - 2 and GMVI

Kill information - 4 and GMVI

3. **MIFI Data Entry Requirements and Explanation.**

- a. **General Processing.** MIFI is accessed from MIEI by GMVI staff to enter inspection information for the field. In **E(ntry)** mode, MIFI responds with a slot for current image lines and a slot for the total lines required for the field information. (The total number of lines allowed by MIFI is 99.) The user enters the total number of lines required and presses **SEND**. MIFI responds with the requested number of blank lines, and the user then enters the message(s)

desired. In **U(pdate)** mode, MIFI shows the number of image lines currently being displayed and requests the total number of lines required, including the current information. (The total number of lines equals the number of lines currently being used plus the number of lines for the new information.) The user enters the total number of lines required and presses **SEND**. MIFI displays the current information plus the extra lines requested for the new information. The user then enters the desired message(s). Existing lines of information may be deleted by blanking them out.

In **R(etrieval)** mode, MIFI displays the inspection field information as it has been entered by Headquarters staff.

The entire text of a field information screen may be deleted by a user in **R(etrieval)** mode, provided he/she is logged into MSIS with the unit code of GMVI and has a password authority access level of four (4) or greater. If authority exists, the message "KEY KILL TO DELETE INFORMATION" will appear in the Response Slot when the field information image is displayed. The word **KILL** may be typed in the Command Slot and sent. This removes all previously saved text.

- b. Special Processing. Each time MIFI is entered or updated, the data slot on the MSIS Directory that appears along side of the MIEI listing is changed to the current system date. This date is not modified if MIFI is called in **E(ntry)** or **U(pdate)** mode and sent without changing any of the text. Should the user change the text and then change it back to the original text, this is interpreted as modification and the date of update will change to the current system date. When MIFI is killed, the date in the update data slot on the MSIS Directory is blanked out.

FIGURE 8-1. DATA DEFINITIONS FOR MIFI

C. Port File Activity Summary -- PFAS.

Please see the Port File Transaction Guide, COMDTINST M5230.21A, for information about PFAS.

D. Port File Marine Inspection Activity Summary -- **PFMI**.

Please see the Port File Transaction Guide, COMDTINST M5230.21A, for information about PFMI.

DATA DEFINITION ABBREVIATION MEANINGS

The abbreviations used in the data definition screens are defined as follows:

- CD** = Calendar date. Standard date format is DDMONYR (day's date, 2 col.; month, 3 col.; and year, 2 col.); e.g., 28SEP86. This is an edit value and must be entered in that form.
- CID** = Cargo Identification Code. This is the three letter CHRIS code used to identify chemicals in MSIS.
- CIN** = Class Identification Number. If assigned by MSIS, this number is in the format of SCxxxxxx where SC stands for Special Class and xxxxxx is a sequential number; for example, SC000201.
- CN** = Case Number. Standard format is XXYRxxxxxx where XX is the 2 character product set prefix, YR is the year and xxxxxx is a sequential number assigned by MSIS; for example, PS86000001. Product set prefixes include MI, VD, MV, MC, MP, PS, and VR.
- CT** = Standard clock time; e.g., 12:57AM or 4:30PM. Note that colons are required, spaces are not allowed, and "AM" and "PM" must be added.
- D** = Decimal string. May be placed anywhere in the field. If no decimal point is given, MSIS will insert one at the end of the string.
- ENID** = Encumbrance Identification.
- FIN** = Facility Identification Number. A unique number assigned to each facility by GMVI. The number is in the form of Pxxxxxxx where P stands for platform and xxxxxx is the platform's number as designated by the Mineral Management Service.
- I** = Integer string. May be placed anywhere in the field.
- IPN** = Involved party identification number. This number is in the form of IPYRxxxxxx where IP is Involved Party, YR is the year and xxxxxx is a sequential number assigned by MSIS; for example, IP86000001.
- LIT** = Literal, faithful copy of something; i.e., name, serial number, etc. MSIS will not edit these entries and accuracy is necessary for proper interpretation and analysis

MBOX = Mailbox number. Standard format is MBYRxxxxxx where MB is mailbox, YR is the year and xxxxxx is a sequential number assigned by MSIS; for example, MB86004082.

MT = Military time. Standard 24-hour clock time; e.g., 1520 = 3:20 p.m. Elapsed time is also entered in the same form; e.g., 1 hour and 15 minutes = 0115. Note that no colons or spaces are included. NOTE - MSIS uses 0000 rather than 2400.

NARR = Narrative entry. Enter data or comments in a free-form manner. MSIS places no restrictions on data or comment contents.

NEC = Not elsewhere classified, i.e., none of the above.

PORT = Standard port/unit identifiers.

QCLASS = Subchapter Q Class Number. This is the first seven characters of a Subchapter Q Number. All zeros normally appearing in the number and the decimal point (.) must be included when accessing MSIS products; for example, 161.045.

QNUM = Subchapter Q Number. QNUM is a number that may be 12, 13, 15, or 16 characters long, depending on whether the number refers to a primary label or private label supplier. The following are acceptable formats for QNUM, with x being equal to a digit and A being the private label identifier:

xxx.xxx/xxxx	Primary label supplier
xxx.xxx/xxxx/xx	Primary label supplier with mod
xxx.xxx/Axxxx	Private label supplier
xxx.xxx/Axxxx/xx	Private label supplier with mod

All zeros normally appearing in the number must be included when accessing MSIS products; for example, 161.123/0233.

UID = User identifier.

VIN = Vessel Identification Number. If assigned by MSIS, it is in the form of CGXXXXXX where xxxxxx is a sequential number. A VIN may also have the prefixes D and L. Both of these have a seven digit number.

X = Checkmark. X or blank is allowed. NOTE - Blank is not allowed for validation for some fields.

Y = Yes/No standard, Y or N or blank is allowed. NOTE - Blank is not acceptable for PENALTY ACTION slots.

MARINE INSEPTION PRODUCT SET POLICY GUIDANCE

1. GENERAL.

- a. Marine Inspection Products. The Marine Inspection (MI) Product Set has been designed to be the primary means of recording and processing inspections and examinations normally conducted by marine inspectors. The Marine Inspection Activity Report (MIAR) is the corner stone of the product set for reporting inspections and accounting for resource hours. MIAR is intended and shall be used for the following activities:
 - (1) Inspections of certificated U.S. commercial vessels,
 - (2) Annual and LOC examinations of foreign flag tank vessels,
 - (3) Control Verification of foreign vessels,
 - (4) Inspections and examinations of platforms on the OCS,
 - (5) Factory inspections.
- b. Port Safety Products. Port safety activities will continue to be recorded on the Port Safety Boarding Report (PSBR) as required by the Port Safety and Security Program. These activities include:
 - (1) Annual examinations of foreign freight vessels.
 - (2) Oil transfer monitors on vessels.
 - (3) Packaged hazardous materials transfer monitors.
 - (4) Marpol and Navigation Safety compliance examinations
 - (5) Uninspected vessel examinations.
- c. Dual Reporting. The MI Product Set does not have the capability and is not intended to capture resource hours expended by personnel conducting activities normally reported on a PSBR. Inspections and examinations involving both marine inspectors and port safety personnel will require the submission of two reports to properly capture resource information. Man hours should be allocated to the appropriate report to avoid double counting. Dual reporting with an MIAR and PSBR will be frequently necessary for LOC and Tank Vessel Safety Examinations. Boarding scope for the PSBR will be Annual Examination or other applicable boarding scope description. The unit(s) shall use the reference case slots in each report to record the MI or PS case number of the corresponding report.

- d. Timeliness of Reports. The prompt filing and validation of inspection and port safety cases is critical. Our ability to effectively manage resources in part depends upon timely submission and validation of MSIS case reports. The actions of another unit are often based upon the information MSIS provides, and our accounting system for resource hours is obtained from MSIS inspection and port safety reports. Validation of domestic inspection cases shall occur as soon as possible, but in no case later than 30 days after the completion of an inspection activity.
2. Scheduling Inspections for Certification. The Marine Inspection Letter of Notification (MILON) and Marine Inspection Scheduler Function (MISF) transaction are used to notify operators concerning pending inspections and schedule inspections for certification. The Maritime Safety Act and implementing regulations (46 CFR 2) require vessel owners/operators to notify the OCMI whether the vessel will be operated so as to require an inspection. The required notice must be submitted in writing at least 30 days prior to the COI expiration. This requirement places an added importance to the timely mailing of the MILON and recording of notifications received in MISF.
 - a. MILON. The MILON serves two purposes -- it advises a vessel's operator that the vessel's Certificate of Inspection will expire within 60 days and states that the Coast Guard shall be notified regarding the future status of the vessel as required by the Maritime Safety Act of 1984. MSIS queues the MILON to the unit issuing the last COI 60 days prior to the expiration of a vessel's COI. OCMI's should insure this letter is sent to the responsible party as soon as possible to allow notification within the required time period. Form CG-3752 (Application for Inspection of U.S. Vessel) shall be enclosed with the MILON. Vessel owners/operators are requested to complete and return the Application for Inspection with the best available information or, detach and submit the form provided at the bottom of the letter.
 - b. Scheduling Inspections. The timely scheduling of case upon receipt of notification is particularly important in cases where the vessel owner does not know where the vessel will be inspected and has notified the last OCMI as the only recourse. Upon receipt of a notification of inspection from a vessel operator, the unit shall schedule an inspection for the vessel in the scheduler function (MISF). MISF shall be completed using the best information available. The date the notification was received shall be entered in the 'NOTIFY DT' slot in MISF. When the port that will actually conduct the inspection attempts to schedule a case, they will find a case scheduled by the port that received the original notification. The existing MSIS case may be transferred to the port conducting the inspection by entering MISF in update mode and changing the port code. MSIS will update inspection status logs to reflect the new port conducting the inspection and remove the case from the other port's list of scheduled inspections log. This transfer procedure will work provided the case has not been filed as an activity report (MIAR) and remains as a scheduled case (MSIF).

3. Inspections by Detachments. MSD's and MIDET's are to schedule and file their own inspections in MSIS under their detachment port code and should not log on behalf of the parent unit. MSIS will record inspection activities and resource hours by detachments separate from the parent unit while maintaining unit activity logo for both. This capability exists for Marine Inspection products only and is not available for Port Safety, Marine Pollution, Marine Violation, or Marine Casualty products. Certain limitations exist:
 - a. Parent commands retain case validation authority for cases filed by their detachment.
 - b. When filing MIARs, the detachment must insure all inspection types are correct. Parent units cannot change inspection types once the detachment has passed the case to the parent for validation.
 - c. Parent units may schedule cases for the detachment. The procedure for processing cases is the same as described in para. 2.b above.
 - d. Parent units must file administrative hours associated with revising the inspection paperwork. Hours are entered on the MIAR in the ADMIN slot prior to validation.
4. Hull Examinations.
 - a. MSIS refers to an examination for credit drydocking as a "Hull Exam". A hull examination includes alternative forms of credit drydocking such as internal in lieu of dry dock, light draft and working draft examinations.
 - b. Any form of examination for dry dock credit is scheduled as a Hull Examination in MISF using the code "HUL". The Marine Inspection Status Details (MISD) transaction captures specific information concerning the date, type of hull examination and the next due date for a hull examination.
 - c. MSIS prints on the Certificate of Inspection the date and specific type of the last hull examination in the space below the issue date of the COI.
5. Deficiencies. The recording and tracking of deficiencies is one of the most important aspects of MSIS. The safety performance of a vessel can be measured, in part, by the number and types of deficiencies detected during inspections and examinations. While the recording of all deficiencies detected is desirable, deficiencies which affect the safety of the vessel are mandatory. The accurate assignment of codes in the data slots on the deficiency report is critical to the analysis of class approved equipment problems.

6. Progressive Inspections.

- a. A progressive inspection is an inspection involving more than one OCMI, e.g. a "running" biennial. Inspections conducted by detachments for validation by the parent unit are not progressive inspections. A progressive inspection must be specified in the schedular function (MISF) prior to filing a MIAR. MSIS processes a progressive case report much like a normal report, except that all involved units are able to file or clear deficiencies and report their own resource hours expended on the inspection. Progressive inspection reports are limited to inspections for certification (initial and reissue), reinspections, hull exams and examinations for issuance of a Certificate of Compliance.
- b. The progressive inspection feature involves an extraordinary amount of MSIS file activities and shall only be used when necessary. Invalidation of progressive inspections is an extremely complex process. Particular care must be taken to insure the accuracy of data prior to passing the report to the next unit.

7. Permits to Proceed.

- a. The certificate action Permit to Proceed (PTP) for an MIAR employs special MSIS action. MSIS changes the status column for the Certificate of Inspection in Vessel File List of Documents (VFLD) to "PTP". This status remains until an MIAR is filed with a certificate action of "Valid". Until then, a port attempting to print a COI while the certificate status is PTP must acknowledge a warning message from MSIS indicating that the COI status is PTP. This feature has been designed to alert other offices they are about to issue a certificate to a vessel operating under a permit to proceed. An inspection special note (MISN) should be filed with the case addressing the issuance of a permit to proceed. The expiration date of the MISN should be set equal to the expiration date of the current COI.
- b. MSIS does not print permits to proceed. Permit to Proceed (CG Form 938) shall continued to be used.

8. Duplicate Certificates of Inspection. When issuing a duplicate COI after a reinspection of other activity, the issuing port shall make an entry indicating the date and port of the reinspection with the signing official's initials in the space provided on the COI.

9. Cancelled Inspections. Resources expended on inspections or examinations which are cancelled by request of the operator/owner prior to completion are to be indicated on an MIAR by inserting an 'X' in the "CTF" (Close to File) slot. MSIS will record the resource hours associated with the inspection but will not change inspection status of the vessel. The use of this type of report shall be limited to instances where inspector man-hours were committed. Cases involving administrative hours only are not appropriate for close to file action.

10. Subchapter Q Information. The initial seeding of Subchapter Q information will not be completed for some time. Data entry is likely to continue for several months. Pending completion of data loading, missing information from the Subchapter Q listings should not be construed as a particular item being unapproved. An announcement will be made when data loading is completed.
11. Certificates of Compliance (COC). The MSIS Certificate of Compliance is intended to replace other forms including the letter of Compliance (Form CG-2832A) and Tank Vessel Examination Letter (Form CG-840S-1). The COC is still under development; distribution of the forms and usage guidance is forthcoming.
12. Inspection Status Details. The Marine Inspection Status Details (MISD) product must be completed after any inspection for certification or hull examination. The following policy applies to entering dates for periodic inspections:
 - a. Hull Examination - enters the last day of the month due. (This policy will be reviewed and may be revised upon promulgation of new regulations)
 - b. Reinspection - enter the anniversary of the inspection for certification date.
13. Pre-Inspection Packages (MIPIP). The Pre-Inspection Package (PIP) is a listing of all information from the summary and detail products contained in the vessel file. Additionally, the PIP lists the locations for the portable fire fighting equipment as well as details about lifesaving equipment which formerly appeared on the COI. For vessels with complete detail level vessel files, the PIP replaces, where applicable, the Hull and Equipment accordions (CG-840AA and CG-840BB, respectively). A copy of the PIP should be forwarded with the COI for placement on the vessel upon completion of an inspection for certification.
14. MIAR and Inspection Notes Comments.
 - a. The comment section of the MIAR is intended for high level summaries of inspection events, such as plate renewals, major deficiencies, nature of a special examination not readily indicated by the inspection type, details of extraordinary hours devoted to an inspection. It is not intended to replace the inspection narrative or for restating the type of inspection.
 - b. Inspection notes should be specifically address areas where special attention or examination should be made. Inspection note expiration dates should be carefully considered since MSIS retains all notes regardless of the expiration date. Unexpired inspection notes appear in MICP (Marine Inspection Critical Profile) and Port Safety Vessel History (PSVH). Expired inspection notes can be retrieved from the MIAR (or VIMR) associated with the note.

Encl: (2) to COMDTINST M5230.14B

15. Special Classes.

- a. The authority for defining special classes has been reserved, for the time being, to Commandant (G-MVI). Over 100 special classes, consisting primarily of design classes, have been defined. Other classes include commercial vessels over 20 years of age and vessels in the Ready Reserve Fleet (RRF). Commandant (G-MVI) will define additional special classes as necessary.
- b. In defining special classes, certain prefixes for the Class Identification Number (CIN) were used to differentiate between design classes and all other special classes. A CIN beginning with "DC" indicates a design class, while an "SC" prefix indicates a special class. For design classes, the third character of the CIN indicates the service of the vessel, e.g. "F" for freight, "T" for tank ship, etc.
- c. Units are encouraged to use the special class products in conjunction with research into potential classes problems. The MSIS transaction Vessel File Class Membership (VFCM) will reveal any class memberships for a particular vessel. From FVCM, a user can select Vessel File Special Class (VFSC) which lists all other vessels belonging to the class.
- d. Any office desiring to have a group of vessels defined as a class may submit a request to Commandant (G-MVI) for evaluation. Requests for defining a design class of barges or 'T' boats are encouraged, particularly those which operate in more than one OCMI zone. Corrections, additions or deletions to vessel classes are also requested.

CHAPTER 1. MARINE SAFETY PRODUCT SET SUMMARY

A. General.

1. Design. The Marine Safety product set contains the master directory to all product set indexes in MSIS, as well as administrative products used to post information for users and to support system ease of use.
2. Use. This product set contains products used in both entry/update and retrieval modes. These products serve as a menu into MSIS System products, provide easy login and logout procedures, and post information and notices via the bulletin board, port board, the login greeting message, and the training information product.
3. Transaction Guide. This guide presents the Marine Safety transactions, their content, and how they are to be used. The guide also includes a discussion of how the product set works with MSIS.

B. Data Controls and Accounting Procedures.

1. MSIS Data Controls. Because MSIS contains an integrated data base, updated by all functions which participate in MSIS, certain controls are imposed on certain data to ensure their correctness. From the standpoint of Marine Safety, however, there are none. Rather these data controls are found on other products within the MSIS system.

C. Product Description. The Marine Safety product set contains administrative products used to enhance the user support requirements of MSIS. It also contains the master directory to all other MSIS menus or indexes.

1. Entry, Update and Retrieval Products. All Marine Safety products accessible in entry/update mode are also available in retrieval mode. These products are described below.
 - a. MSIS. MSIS Directory. This product contains all of the entry/retrieval indexes available in the MSIS System, e.g., MIEI and PFEI. It also serves as a menu for the Marine Safety Bulletin Board (MSBB), Marine Safety Training Information (MSTI), Marine Safety Port Board (MSPB), Port File Scheduled Outputs (PFSO), Port File Incoming Mail Log (PFIML), Port File Morning Report (PFMR), and the Login and Logout (L/L) procedures.
 - b. L/L. Login and Logout Procedures. These procedures allow the user to easily log into MSIS using a different password or to directly log out of MSIS. L/L also allows a user to login on behalf of another port.

- c. **MSBB.** Marine Safety Bulletin Board. MSBB displays daily bulletins on topics of common interest to the community of MSIS users.
- d. **MSGM.** Marine Safety Greeting Message. MSGM provides a "scratch pad" for the MSIS Headquarters System Manager to broadcast messages, comments, or status indicators. MSGM does not appear on the MSIS Directory screen.
- e. **MSTI.** Marine Safety Training Information. MSTI provides a way for Headquarters (GMP3) to supply training information to MSIS field users.
- f. **MSPB.** Marine Safety Port Board. The MSPB product provides a vehicle for personnel at any Coast Guard unit to post general information for all other MSIS units.
- g. **MSAB.** Marine Safety Assignment Board. MSAB provides a way for GPO to provide information to MSIS field users concerning available duty assignments and current assignment policies.
- h. **Port File products.** Port File Scheduled Outputs, Port File Incoming Mail. Log, Port File Morning Report. These products are discussed in detail in the Port File Transaction Guide, COMDTINST M5230.21A.

CHAPTER 2. MARINE SAFETY MSIS DIRECTORY

A. MSIS Directory -- MSIS.

1. MSIS Purpose and Description.

- a. Provides the login mechanism to MSIS and serves as the master directory to all other MSIS menus or indexes, the Marine Safety Bulletin Board, the Marine Safety Port Board, and the Marine Safety Training Information product.
- b. Displays the MSIS greeting message, dates of the last updates for the field information products and the bulletin board and indicates the existence of pending "mailbox" messages, "morning reports", pre-inspection packages, stickers, or letters to be printed for that unit.
- c. Allows one unit to act on behalf of another via the Login procedure, if the former is so authorized. d. Figure 2-1 shows MSIS as it appears on the terminal.

2. Accessing MSIS.

- a. Menu. MSIS may be accessed from itself by logging in with a new password (using **SEL,15**).

- b. Free-Form. MSIS can be accessed through free-form with:

-MSIS
EXIT

- c. Selection From Other Products. MSIS is accessed initially upon logging into the system and is automatically accessed thereafter, as a result of always being the root product on the product queue.

- d. Product Use Authority Levels.

Retrieval – 1

Login as another unit - 5

3. MSIS Data Entry Requirements and Explanation.

- a. General Processing. The MSIS Directory serves two functions:

1. To provide the login mechanism to MSIS, and
2. To serve as the master directory to all other MSIS product set indexes.

It displays the MSIS greeting message, dates of the last updates for the field information products and the bulletin board, and indicates the existence of pending "mailbox messages", "morning reports", or letters to be printed for the unit.

- b. The MSIS Directory also lists the entry/retrieval indexes of the product sets that are (or will be) available in the MSIS System. These indexes may be selected by the user to access individual products within the desired set(s). The MSIS Directory also lists the Marine Safety Bulletin Board (MSBB), the Marine Safety Port Board (MSPB), the Marine Safety Training Information product (MSTI), and Login and Logout (L/L) procedures. The Login selection may be used to log the user into MSIS with a new password, while the Logout selection logs the user out of the MSIS System.
- c. A user with the proper password authority access level may enter MSIS as another unit by entering that unit's code in the data slot marked "If Session is on Behalf of Another Port/Unit, Enter Other Unit's Code." This causes the MSIS internal unit code to be set to the other unit code, and the user loses all identity with his/her own unit. For example, the information presented on the MSIS Directory for mailboxes, morning reports and scheduled outputs will be for this "other" unit, not the user's unit.
- d. When logging into MSIS, a user is given up to four (4) opportunities to key a valid combination of pass word, user identifier, and unit code. After four (4) unsuccessful tries, the user is automatically logged out of MSIS.
- e. Special Processing. The MSIS Directory contains a number of indicator slots which present useful information to the user. The indicator slots adjacent to the menus contain the date of the last update of that product set's field information product; if this slot is blank, data is not currently available on that product. Indicator slots also appear adjacent to MSBB, PFMR, PFIML and PFSO. The MSBB slot presents the last update date for the bulletin board while an "MR" adjacent to PFMR or an "MB" adjacent to PFIML indicate the existence of a morning report or mail (PFMB), respectively. The PFSO indicator slot has seven possible alternatives:

DL	Documentation Letter
IP	Pre-Inspection Package
LT	Inspection Letter
RL	Renewal Notification Letter and/or Fleet Renewal enclosures
SF	Renewal Stickers SO A combination of outputs
blank	No outputs available

CHAPTER 3. MARINE SAFETY LOGIN/LOGOUT PROCEDURES

- A. General. This section contains those procedures which allow the user to easily log into and log out of MSIS. They are particularly useful to users at the same port who sequentially use the same terminal.

B. Login/Logout Procedures -- L/L.

1. L/L Purpose and Description.

- a. Allows the user to easily login using a different password or to directly logout of MSIS.
- b. Allows one unit to act on behalf of another if the former is so authorized.
- c. Allows users at the same port to sequentially use the same terminal without using the entire login procedure.
- d. Provides a quick, easy way to logout of MSIS.
- e. Figure 3-1 shows L/L as it appears on the terminal.

2. Accessing L/L.

- a. Menu. The Login and Logout procedures may only be accessed through the MSIS Directory.
- b. Free-Form. L/L can be accessed through free form with:

-QUIT
- c. Selection From Other Products. The Login and Logout procedures are not accessed from other products.
- d. Product Use Authority Levels. Retrieval/Entry/Update - 1 Login as another unit - 5

3. L/L Data Entry Requirements and Explanation.

- a. General Processing. The Login procedure permits a user to login with a different password without using the standard (longer) login procedure. The user enters "SEL,15", MSIS responds with a blank password slot. The user enters the new password and MSIS responds with User ID and Unit slots. The user enters information and is again presented with the MSIS Directory for further selections.
- b. The Login procedure is normally used in the following two situations:
 - (1) To allow a user at one unit to act on behalf of another unit, if so authorized.

- (2) To allow users at the same port to sequentially use the same terminal without using the entire login procedure (This means that each user can protect his/her password while leaving the terminal in "Ready" mode for the next user.)
- c. The Logout procedure provides the user with a quick, easy way to logout of MSIS. Entering "**SEL,35**" performs this function.
- d. Special Processing. None.

CHAPTER 4. MARINE SAFETY GREETING MESSAGE

- A. General. This section contains the Marine Safety Greeting Message (MSGM), a product which permits the entry and display of messages and comments from the MSIS Headquarters System Manager.

B. Marine. Safety Greeting Message -- MSGM.

1. MSGM Purpose and Description.

- a. Provides a 5-line "scratch pad" for the MSIS Headquarters System Manager to broadcast some messages, comments, or status indicators.
- b. Figure 4-1 shows MSGM as it appears on the terminal.

2. Accessing MSGM.

- a. Menu. MSGM is not accessed from a menu.
- b. Free-Form. MSGM is only accessed through free-form with:

-MSGM,E,U,or R

where:

E = entry mode

U = update mode

R = retrieval mode

EXAMPLE:

-MSGM,U

- c. Selection From Other Products. MSGM is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval – 1

Entry/Update - 2

3. MSGM Data Entry Requirements and Explanation.

- a. General Processing. MSGM is used exclusively by the MSIS Headquarters System Manager in entry and update modes. It is used to enter or change the greeting message that appears on the MSIS products. Due to the fact that MSGM is only used (in entry and update modes) by the MSIS Headquarters System Manager, it does not appear on any menu screens and may be directly accessed only through free-forming. In retrieval mode, MSGM displays the current greeting message at the user's terminal.
- b. Special Processing. None.

CHAPTER 5. MARINE SAFETY ADMINISTRATION

- A. General. This section contains four products which provide informal information to MSIS users. The Marine Safety Bulletin Board (MSBB) allows the entry and display of daily bulletins. Marine Safety Training Information (MSTI) provides a way for Headquarters to supply training information to MSIS field users. The Marine Safety Port Board (MSPB) provides a vehicle for personnel at any Coast Guard unit to post general information to all other MSIS units. The Marine Safety Assignment Board (MSAB) provides information on duty assignments.

B. Marine Safety Bulletin Board -- MSBB.

1. MSBB Purpose and Description.

- a. Displays daily bulletins on topics of common interest to the community of MSIS users.
- b. Permits bulletin items to be entered or updated by the MSIS Headquarters System Manager.
- c. Figure 5-1 shows the data definitions for MSBB. See Enclosure (1) for the abbreviation meanings.

2. Accessing MSBB.

- a. Menu. MSBB is normally accessed through the MSIS Directory.
- b. Free-Form. MSBB can be accessed through free-form with:

-MSBB,E,U,or R

where:

E = entry mode

U = update mode

R retrieval mode

EXAMPLE:

-MSBB,R

- c. Selection From Other Products. MSBB is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval – 1 Entry/Update - 2

Kill Bulletin Board - 4

3. MSBB Data Entry Requirements and Explanation.

- a. General Processing. In entry and update modes, MSBB is used exclusively by the MSIS Headquarters System Manager to enter or change bulletin board messages. The maximum number of lines available for text is 99.
- b. In retrieval mode, MSBB displays current bulletin board items at the user's terminal.

- c. The entire text of a bulletin board may be deleted by a user in retrieval mode, provided he/she has a password authority access level of four (4) or greater. If authority exists, the message "Key Kill to Delete Bulletins" will appear in the response line when the bulletin board image is displayed. The word "KILL" may be typed in the command line and sent. This removes all previously saved text.
- d. Special Processing. Each time MSBB is entered or updated, the data slot on the MSIS Directory that appears beside of the MSIS listing is changed to the current system date. This date is not modified if MSBB is called in entry or update mode and sent without changing any of the text. Should the user change the text and then change it back to the original text, this is not interpreted as a modification and the date of update does not change. When the bulletin board is killed, the date in the update data slot on the MSIS Directory is blanked out.

DATA DEFINITIONS FOR MSBB

C. Marine Safety Training Information -- MSTI.

1. MSTI Purpose and Description

- a. Provides a means for Headquarters (GMP3) to supply training information to the field offices.
- b. Figure 5-2 shows the data definitions for MSTI. See Enclosure (1) for the abbreviation meanings.

2. Accessing MSTI.

- a. Menu. MSTI is normally accessed through the MSIS Directory by Headquarters and field staff.
- b. Free-Form. MSTI can be accessed through free-form with:

-MSTI,<E, U, or R>

where:

E = entry mode

U = update mode

R = retrieval mode

EXAMPLE:

-MSTI,R

Note: MSTI can be free-formed in entry and update modes by GMP3 staff only. Both Headquarters and field staff can free-form MSTI in retrieval mode.

- c. **Selection From Other Products.** MSTI is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval – 1 Entry/Update - 2 and GMP3
Kill information - 4 and GMP3

3. MSTI Data Entry Requirements and Explanation.

- a. General Processing. MSTI is accessed from the MSIS Directory by GMP3 staff to enter training information for the field. In entry mode, MSTI responds with a slot for current image lines and a slot for the total lines required for the training information. (The total number of lines allowed by MSTI is 99.) The user enters the total number of lines required and presses SEND. MSTI responds with the requested number of blank lines, and the user then enters the

message(s) desired. In update mode, MSTI shows the number of image lines currently being displayed and requests the total number of lines required, including the Current information. (The total number of lines equals the number of lines currently being used plus the number of lines for the new information.) The user enters the total number of lines required and presses SEND. MSTI displays the current information plus the extra lines requested for the new information. The user then enters the desired message(s). Existing lines of information may be deleted by blanking them out.

- b. **Note:** Any blank lines are removed when MSTI is sent. A line must contain at least one character to be included in the message.
- c. In retrieval mode, MSTI displays the training information as it has been entered by Headquarters staff.
- d. The entire text of a training information screen may be deleted by a user in retrieval mode, provided he/she is logged into MSIS with the unit code of GMP3 and has a password authority access level of four (4) or greater. If authority exists, the message "KEY KILL TO DELETE INFORMATION" will appear in the Response Slot when the training information image is displayed. The word KILL may be typed in the Command Slot and sent. This removes all previously saved text.
- e. Special Processing. Each time MSTI is entered or updated, the data slot on the MSIS Directory that appears beside the MSTI listing is changed to the current system date. This date is not modified if MSTI is called in entry or update mode and sent without changing any of the text. When MSTI is killed, the date in the update data slot on the MSIS Directory is blanked out.

D. Marine Safety Port Board -- **MSPB.**

1. **MSPB** Purpose and Description.

- a. Provides a means for any MSIS users to post general information for all other MSIS users.
- b. Figure 5-3 shows the data definitions for MSPB. See Enclosure (1) for the abbreviation meanings.

2. Accessing **MSPB.**

- a. Menu. MSPB is normally accessed through the MSIS Directory.
- b. Free-Form. MSPB can be accessed through free-form with:

-MSPB,<E, U, or R>

where:

E = entry mode

U = update mode

R = retrieval mode

EXAMPLE:

-MSPB,R

- c. Selection From Other Products. MSPB is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval – 1

Entry/Update - 2

3. **MSPB** Data Entry Requirements and Explanation.

- a. General Processing. MSPB is accessed from the MSIS Directory by all MSIS users. In entry mode, MSPB responds with a slot for current image lines and a slot for the total lines required for the port board information. (The total number of lines allowed by MSPB is 99.) The user enters the total number of lines required and presses SEND. MSPB responds with the requested number of blank lines, and the user then enters the message(s) desired. In update mode, MSPB shows the number of image lines currently being displayed and requests the total number of lines required, including the current information. (The total number of lines equals the number of lines currently being used plus the number of lines for the new information.) The user enters the total number

of lines required and presses **SEND**. MSPB displays the current information plus the extra lines requested for the new information. The user then enters the desired message(s). Existing lines of information may be deleted by blanking them out.

- b. **Note:** Any blank lines are removed when MSPB is sent. A line must contain at least one character to be included in the message.
- c. In retrieval mode, MSPB displays the port board information as it has been entered by other MSIS users.
- d. **Special Processing.** Each time MSPB is entered or updated, the data slot on the MSIS Directory that appears beside the MSPB listing is changed to the current system date. This date is not modified if MSPB is called in entry or update mode and sent without changing any of the text.

E. Marine Safety Assignment Board -- **MSAB.**

1. **MSAB Purpose and Description.**

- a. Provides a means for Headquarters (GPO) to supply duty assignment information to the field offices.
- b. Figure 5-4 shows the data definitions for MSAB. See Enclosure (1) for the abbreviation meanings.

2. **Accessing MSAB.**

- a. Menu. MSAB is normally accessed through the MSIS Directory by Headquarters and field staff.
- b. Free-Form. MSAB can be accessed through free-form with:

-MSAB,<E, U, or R>

where:

E = entry mode

U = update mode

R = retrieval mode

EXAMPLE:

-MSAB,R

Note: MSAB can be free-formed in entry and update modes by GPO staff only. Both Headquarters and field staff can free-form MSAB in retrieval mode.

- c. Selection From Other Products. MSTI is not accessed from other products.
- d. Product Use Authority Levels.

Retrieval – 1 Entry/Update - 2 and GPO

Kill information - 4 and GPO

3. **MSAB Data Entry Requirements and Explanation.**

- a. General Processing. MSAB is accessed from the MSIS Directory by GPO staff to enter duty assignment information for the field. In entry mode, MSAB responds with a slot for current image lines and a slot for the total lines required for the information. (The total number of lines allowed by MSAB is 99.) The user enters the total number of lines required and presses **SEND**. MSAB responds with the requested number of blank lines, and the user then

enters the message(s) desired. In update mode, MSAB shows the number of image lines currently being displayed and requests the total number of lines required, including the current information. (The total number of lines equals the number of lines currently being used plus the number of lines for the new information.) The user enters the total number of lines required and presses **SEND**. MSAB displays the current information plus the extra lines requested for the new information. The user then enters the desired message(s). Existing lines of information may be deleted by blanking them out.

- b. **Note:** Any blank lines are removed when MSAB is sent. A line must contain at least one character to be included in the message.
- c. In retrieval mode, MSAB displays the assignment information as it has been entered by Headquarters staff.
- d. The entire text of an assignment information screen may be deleted by a user in retrieval mode, provided he/she is logged into MSIS with the unit code of GPO and has a password authority access level of four (4) or greater. If authority exists, the message "KEY KILL TO DELETE INFORMATION" will appear in the Response Slot when the information image is displayed. The word **KILL** may be typed in the Command Slot and sent. This removes all previously saved text.
- e. **Special Processing.** Each time MSAB is entered or updated, the data slot on the MSIS Directory that appears beside the MSAB listing is changed to the current system date. This date is not modified if MSAB is called in entry or update mode and sent without changing any of the text. When MSAB is killed, the date in the update data slot on the MSIS Directory is blanked out.

FIGURE 5-4. DATA DEFINITIONS FOR MSAB

DATA DEFINITION ABBREVIATION MEANINGS

The abbreviations used in the data definition screens are defined as follows:

- CASE** = Case Number. Standard format is XXYYxxxxxxx where XX is the 2 character product set prefix, YY is the year and xxxxxx is a sequential number assigned by MSIS; for example, PS86000001. Product set prefixes include MI, VD, MV, MC, MP, PS, and VR.
- CD** = Calendar date. Standard date format is DDMONYR (day's date, 2 col.; month, 3 col.; and year, 2 col.); e.g., 28SEP86. This is an edit value and must be entered in that form.
- CID** = Cargo Identification Code. This is the three letter CHRIS code used to identify chemicals in MSIS.
- CIN** = Class Identification Number. If assigned by MSIS, this number is in the format of SCxxxxxxx where SC stands for Special Class and xxxxxx is a sequential number; for example, SC000201.
- CT** = Standard clock time; e.g., 12:57AM or 4:30PM. Note that colons are required, spaces are not allowed, and "AM" and "PM" must be added.
- D** = Decimal string. May be placed anywhere in the field. If no decimal point is given, MSIS will insert one at the end of the string. **ENID** = Encumbrance Identification.
- FIN** = Facility Identification Number. A unique number assigned to each facility by GMVI. The number is in the form of Pxxxxxxx where P stands for platform and xxxxxx is the platform's number as designated by the Mineral Management Service.
- I** = Integer string. May be placed anywhere in the field.
- IPN** = Involved party identification number. This number is in the form of IPYYxxxxxxx where IP is Involved Party, YY is the year and xxxxxx is a sequential number assigned by MSIS; for example, IP86000001.
- LIT** = Literal, faithful copy of something; i.e., name, serial number, etc. MSIS will not edit these entries and accuracy is necessary for proper interpretation and analysis.

MBOX = Mailbox number. Standard format is MBYRxxxxxxx where MB is mailbox, YR is the year and xxxxxx is a sequential number assigned by MSIS; for example, MB86004082.

MT = Military time. Standard 24-hour clock time; e.g., 1520 = 3:20 p.m. Elapsed time is also entered in the same form; e.g., 1 hour and 15 minutes = 0115. Note that no colons or spaces are included. NOTE - MSIS uses 0000 rather than 2400.

NARR = Narrative entry. Enter data or comments in a free-form manner. MSIS places no restrictions on data or comment contents.

NEC = Not elsewhere classified, i.e., none of the above.

ON = Official Number. A VIN without the D prefix.

PORT = Standard port/unit identifiers.

QCLASS = Subchapter Q Class Number. This is the first seven characters of a Subchapter Q Number. All zeros normally appearing in the number and the decimal point (.) must be included when accessing MSIS products; for example, 161.045.

QNUM = Subchapter Q Number. QNUM is a number that may be 12, 13, 15, or 16 characters long, depending on whether the number refers to a primary label or private label supplier. The following are acceptable formats for QNUM, with x being equal to a digit and A being the private label identifier:

xxx.xxx/xxxx	Primary label supplier
xxx.xxx/xxxx/xx	Primary label supplier with mod
xxx.xxx/Axxxx	Private label supplier
xxx.xxx/Axxxx/xx	Private label supplier with mod

All zeros normally appearing in the number must be included when accessing MSIS products; for example, 161.123/0233.

UID = User identifier.

VIN = Vessel Identification Number. If assigned by MSIS, it is in the form of CGXXXXXX where xxxxxx is a sequential number. A VIN may also have the prefixes D and L. Both of these have a seven digit number.

X = Checkmark. X or blank is allowed. NOTE - Blank is not allowed for validation for some fields.

Y = Yes/No standard, Y or N or blank is allowed. NOTE - Blank is not acceptable for PENALTY ACTION slots.
